GENERAL CONSTRUCTION NOTES

1. These instructions cover typical product application, fabrication, installation and standard conditions and are general in nature. They provide useful guidelines, but the final shop drawings may include additional details specific to the project. Any conflict or discrepancies must be clarified prior to execution.
2. Materials stored at the job site must be kept in a safe place protected from possible damage by other trades. Stack with adequate separation so materials will not rub together and store off the ground. Cardboard or paper wrapped materials must be kept dry. Check arriving materials for quantity and keep a record of where various materials are stored.
3. All field welding must be done in accordance with AISC guidelines. All aluminum and glass should be shielded from field welding to avoid damage from weld splatter. Results will be unsightly and may be structurally unsound. Advise general contractor and other trades accordingly.
4. Coordinate protection of installed work with general contractor and/or other trades.
5. Coordinate sequence of other trades which affect framing installation with the general contractor (e.g. fire proofing, back up walls, partitions, ceilings, mechanical ducts, HVAC, etc.).
6. General contractor should furnish and guarantee bench marks, offset lines and opening dimensions. These items should be checked for accuracy before proceeding with erection. Make certain that all adjacent substrate construction is in accordance with the contract documents and/or approved shop drawings. If not, notify the general contractor in writing before proceeding with installation because this could constitute acceptance of adjacent substrate construction by others.
7. Isolate all aluminum to be placed directly in contact with masonry or other incompatible materials with a heavy coat of zinc chromate or bituminous paint. Fasteners attaching framing to building structure are typically not provided by Tubelite.
8. Sealant selection is the responsibility of the erector, installer and/or glazing contractor and must be approved by the sealant manufacturer with regard to application and compatibility for its intended use. All sealants must be used in strict accordance with the manufacturer's instructions and applied only by trained personnel to surfaces that have been properly prepared.
9. Sealant must be compatible with all materials with which they have contact, including other sealant surfaces. Consult the sealant manufacturer for recommendations relative to shelf life, compatibility, cleaning of substrate, priming, tooling adhesion, environment, temperature and humidity. Recommend sealant manufacturer perform adhesion "pull test" at "wet" glazing for quality assurance.
10. Drainage gutters and weep holes must be kept clean at all times. Tubelite will not accept responsibility for improper drainage as a result of clogged gutters and weep holes.
11. This product requires clearances at the head, sill and jambs to allow for thermal expansion and contraction as well as construction tolerances. Refer to final distribution drawings for joint sizes. Joints smaller than 1/2" may be subject to failure. Consult the sealant manufacturer for proper sizing of joints.
12. All framing members, entrances and other materials are to be installed plumb, level and true with regard to established bench marks, column center lines or other working points established by the general contractor and checked by the erector, installer and/or glazing contractor.
13. After sealant is set and a representative amount of the wall has been glazed (500 square feet or more), run a water hose test to check installation. On large projects, a hose test should be repeated during glazing operation. This testing should be conducted in accordance with AAMA 501.2 specifications.
14. Cleaning of exposed aluminum surfaces should be done per AAMA recommendations.
15. Care must be taken when assembling aluminum framing components. Over tightening any fastener may cause stripping or fastener failure. Tubelite recommends the use of drill motors with clutches engaged to provide satisfactory tightening of the screw while preventing over torque. The use of impact drill motors is not recommended due to the absence of a clutch device.
16. Check www.tubeliteinc.com for any installation instruction updates.

GENERAL CONSTRUCTION NOTES

17. For cold weather installation, glazing materials (including but not limited to glazing gaskets, isolators and gaskets for air seals and expansion mullions) can become more rigid and thus more difficult to install. These materials should be installed at temperatures above 40 degrees Fahrenheit for proper system performance and ease of installation. A hot box may be required to warm the glazing materials prior to installation. Allow glazing materials to lay flat at 50 degrees Fahrenheit minimum temperature prior to installing.

400SS ASSEMBLY AND INSTALLATION

Refer to Tubelite, Inc website (tubeliteinc.com) for 400SS curtain wall installation instructions.

1. Make sure the opening is square and the perimeter from edge of frame to substrate is 1/2" minimum clearance.
2. Sealant at Horizontal to Vertical frame intersection is not required where Cassette framing will be installed.
3. Water dam installation is not required where Cassette framing will be installed.
4. Check anchor size and location against installation instructions or approved shop drawings.

QUICK REFERENCE CHECKLIST

1. Review slide-n-pivot jamb anchor installation: Pre-load in jamb framing prior to assemble OR mill slot in jamb framing to install slide-n-pivot jamb anchor after cassette frame assembly.
2. Field verify DLO of installed curtain wall prior to cassette frame machining and assembly.
3. Each cassette type has its own sequence of pages for size determination to installation phase.
4. Cassette frames can be installed in vertical runs, horizontal runs or shingled. If spot frame installation is require then head / jamb slide-n-pivot anchor clips must be used at sill also.
5. Sill / Head-Sill slide-n-pivot anchor design for "rollover" cassette installation.
6. Install P4216 PVC perimeter isolator prior to cassette frame installation.
7. Install P4209 gasket prior to cassette frame installation.
8. Install all Outside and Inside corner frame inserts prior to cassette frame installation.
9. Install inside corner cassette frame prior to installation of adjacent cassette frames.

NOTE: Refer to pages 80 -82 for perimeter trim closure installation. Option two requires vertical members to have stem removed 1" from both ends head and sill. This will need to be completed prior to frame installation.

FRAME SIZE CALCULATION

Refer to individual cassette frame types for cassette frame size calculator

GLASS SIZE CALCULATION

Refer to individual cassette frame types for cassette glass size calculator

NOTE: Tubelite Inc is not responsible for glass to frame installation, approval of glass to frame installation or materials used for glass to frame installation.

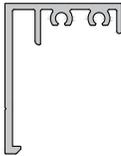

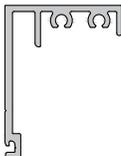

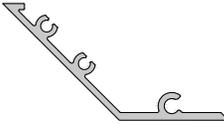

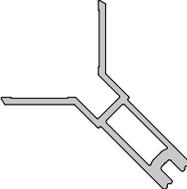

It is the glazing contractors responsibility to obtain approval from glass manufacturer for glass installation.

Finished sections of cassette framing may need to be sent to sealant manufacture for adhesion testing and approval.

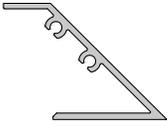

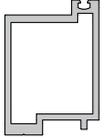

3M VHB TAPE APPLICATION GLAZING

Approved shop drawings showing frame sizes and frame installation, AND finished sections of the cassette framing are required to be sent to 3M for review and approval prior to purchasing tape or glazing commences. Glazing contractor will be required to be trained and certified by qualified 3M personnel prior to VHB tape application or glass installation.
(See 3M website for contact information)

**SUPPORT FRAME (400SS BACK MEMBER) FRAME PREPARATION
FOR CASSETTE INSTALLATION and ANCHORAGE**

- REFER TO 400SS INSTALLATION MANUAL for CURTAIN WALL
BACK MEMBER ASSEMBLY AND ANCHORAGE.

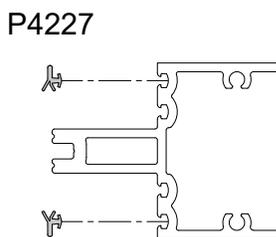

Note: water dams, typical gasket, pressure plates and covers not required.

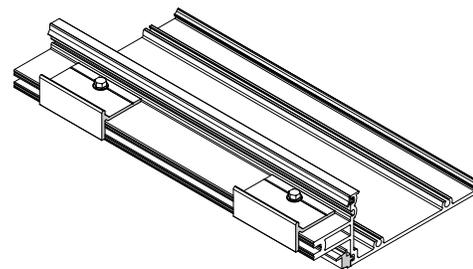

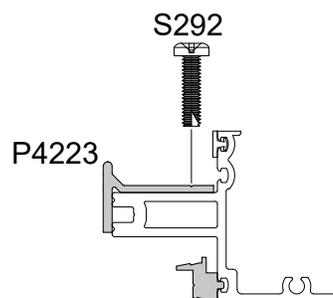

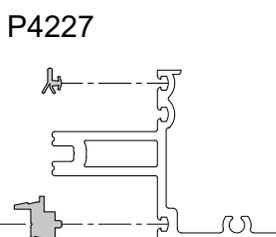

STEP 1: Install P4216 around perimeter framing, secure with S377 - hole pre-drilled 8" o/c. Locate fasteners no more than 2" from ends. Clean drill burrs prior to installing. Clean cut end burrs and align adjacent lineals.

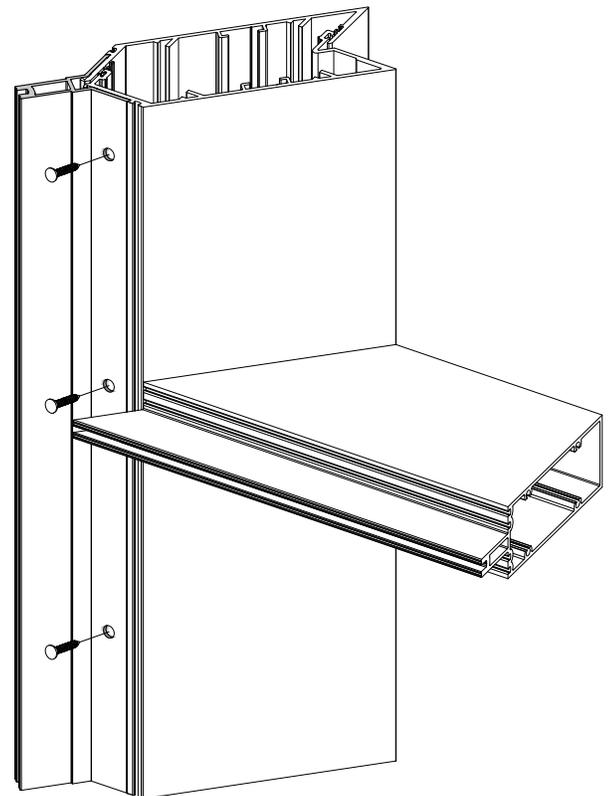

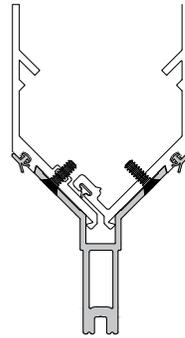

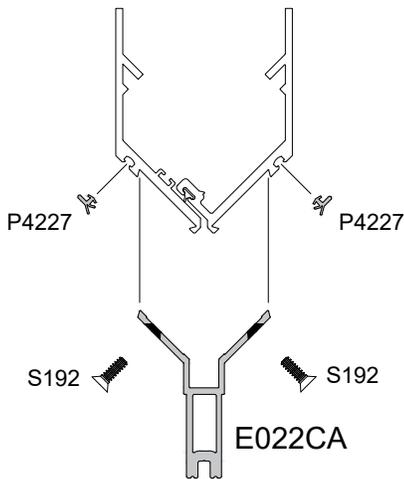

STEP 2: Install spacer gasket P4227 at ALL vertical and horizontal framing members that will receive cassette framing. Leave long at ends as gasket will shrink back - trim gasket prior to cassette installation.

STEP 3: Install starter / anchoring clip P4223 12" o/c with S292 self-tapping fastener. Locate P4223 no more 2" from ends of sill members.

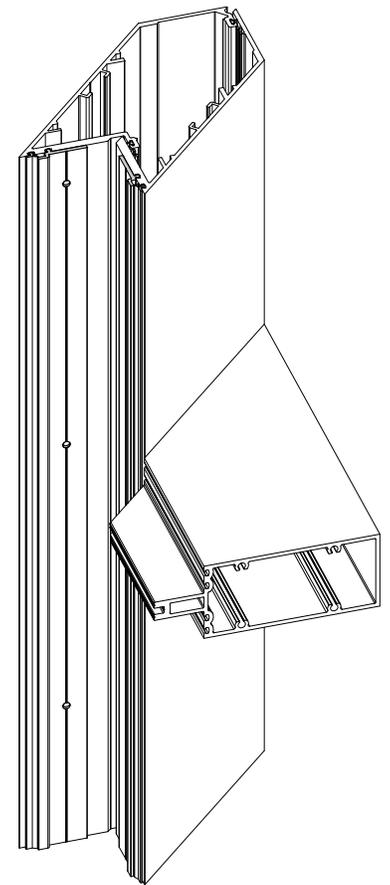

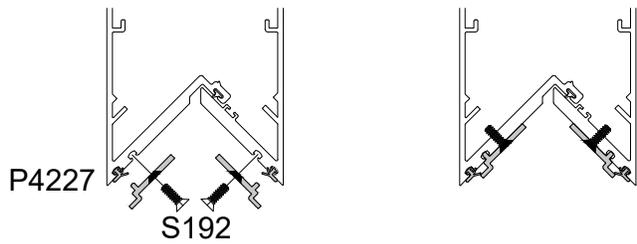

**SUPPORT FRAME (400SS BACK MEMBER) FRAME PREPARATION
FOR CASSETTE INSTALLATION and ANCHORAGE
OUTSIDE CORNERS**

OUTSIDE CORNER FRAME PREP -

- STEP 1: Drill 0.21" clearance holes in E022CA 18" o/c and no more than 2" from each end, then counter sink each hole for S192 fastener head.
- STEP 2: Install E022CA to inside corner frame and match drill #8 hole.
- STEP 3: Install S192 fastener to secure E034CA insert.
- STEP 4: Verify gasket P4227 has been installed into outside corner frame gasket receivers.

**SUPPORT FRAME (400SS BACK MEMBER) FRAME PREPARATION
FOR CASSETTE INSTALLATION and ANCHORAGE
INSIDE CORNERS**

INSIDE CORNER FRAME PREP -

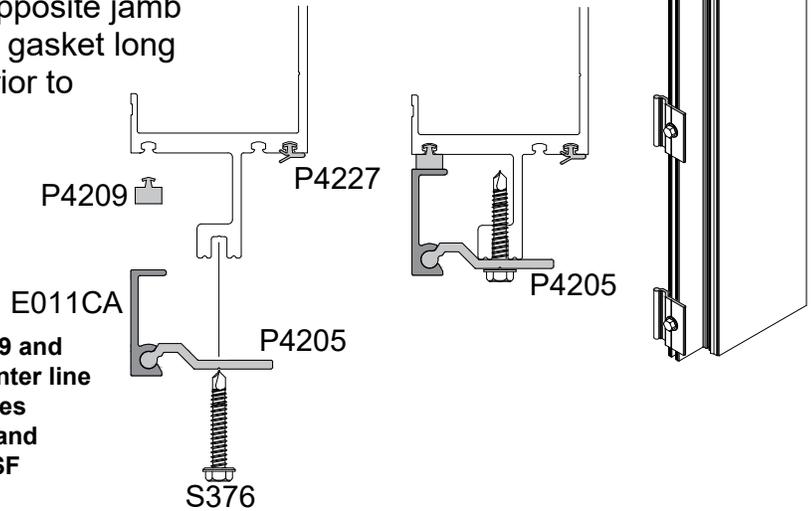

- STEP 1: Drill 0.21" clearance holes in E034CA 18" o/c and no more than 2" from each end, then counter sink each hole for S192 fastener head.
- STEP 2: Verify gasket P4227 has been installed into inside corner frame gasket receivers.
- STEP 3: Install E032CA to inside corner frame and match drill #8 hole.
- STEP 4: Install S192 fastener to secure E034CA insert.

**SUPPORT FRAME (400SS BACK MEMBER) FRAME PREPARATION
 FOR CASSETTE INSTALLATION and ANCHORAGE
 "Glass-to-Edge" - JAMB, HEAD & SILL**

"Glass-to-Edge JAMB FRAME PREP -

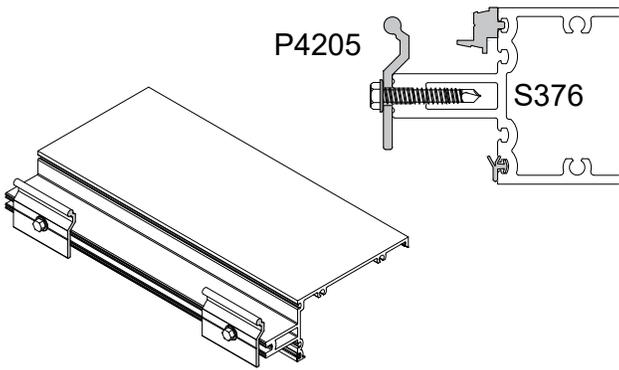

- STEP 1: Install anchor clip P4205 12" o/c using fastener S376 - No more than 2" from ends of DLO.
- STEP 2: Verify frame gasket P4227 has been installed opposite jamb. If P4227 has not been installed in opposite jamb install before moving forward, leave gasket long as it will shrink back - trim gasket prior to cassette frame installation.

NOTE: Install 24" piece of P4209 and 24" piece of E011CA at center line of jambs at cassette frames spanning more than 72" and design loads above 50 PSF

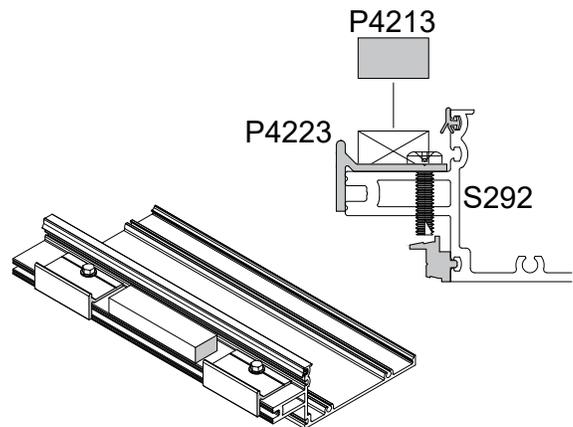

"Glass-to-Edge HEAD FRAME PREP -

- STEP 1: Install anchor clip P4205 12" o/c using fastener S376 - No more than 2" from ends of DLO.
- STEP 2: Verify frame gasket P4227 has been installed opposite side. If P4227 has not been installed install before moving forward, leave gasket long as it will shrink back - trim gasket prior to cassette frame installation.

"Glass-to-Edge SILL FRAME PREP -

- STEP 1: Install anchor clip P4223 12" o/c using fastener S292 - No more than 2" from ends of DLO.
- STEP 2: Install silicone dead load block P4213 locating between P4223 anchor clip.
- STEP 3: Verify frame gasket P4227 has been installed opposite side. If P4227 has not been installed install before moving forward, leave gasket long as it will shrink back - trim gasket prior to cassette frame installation.

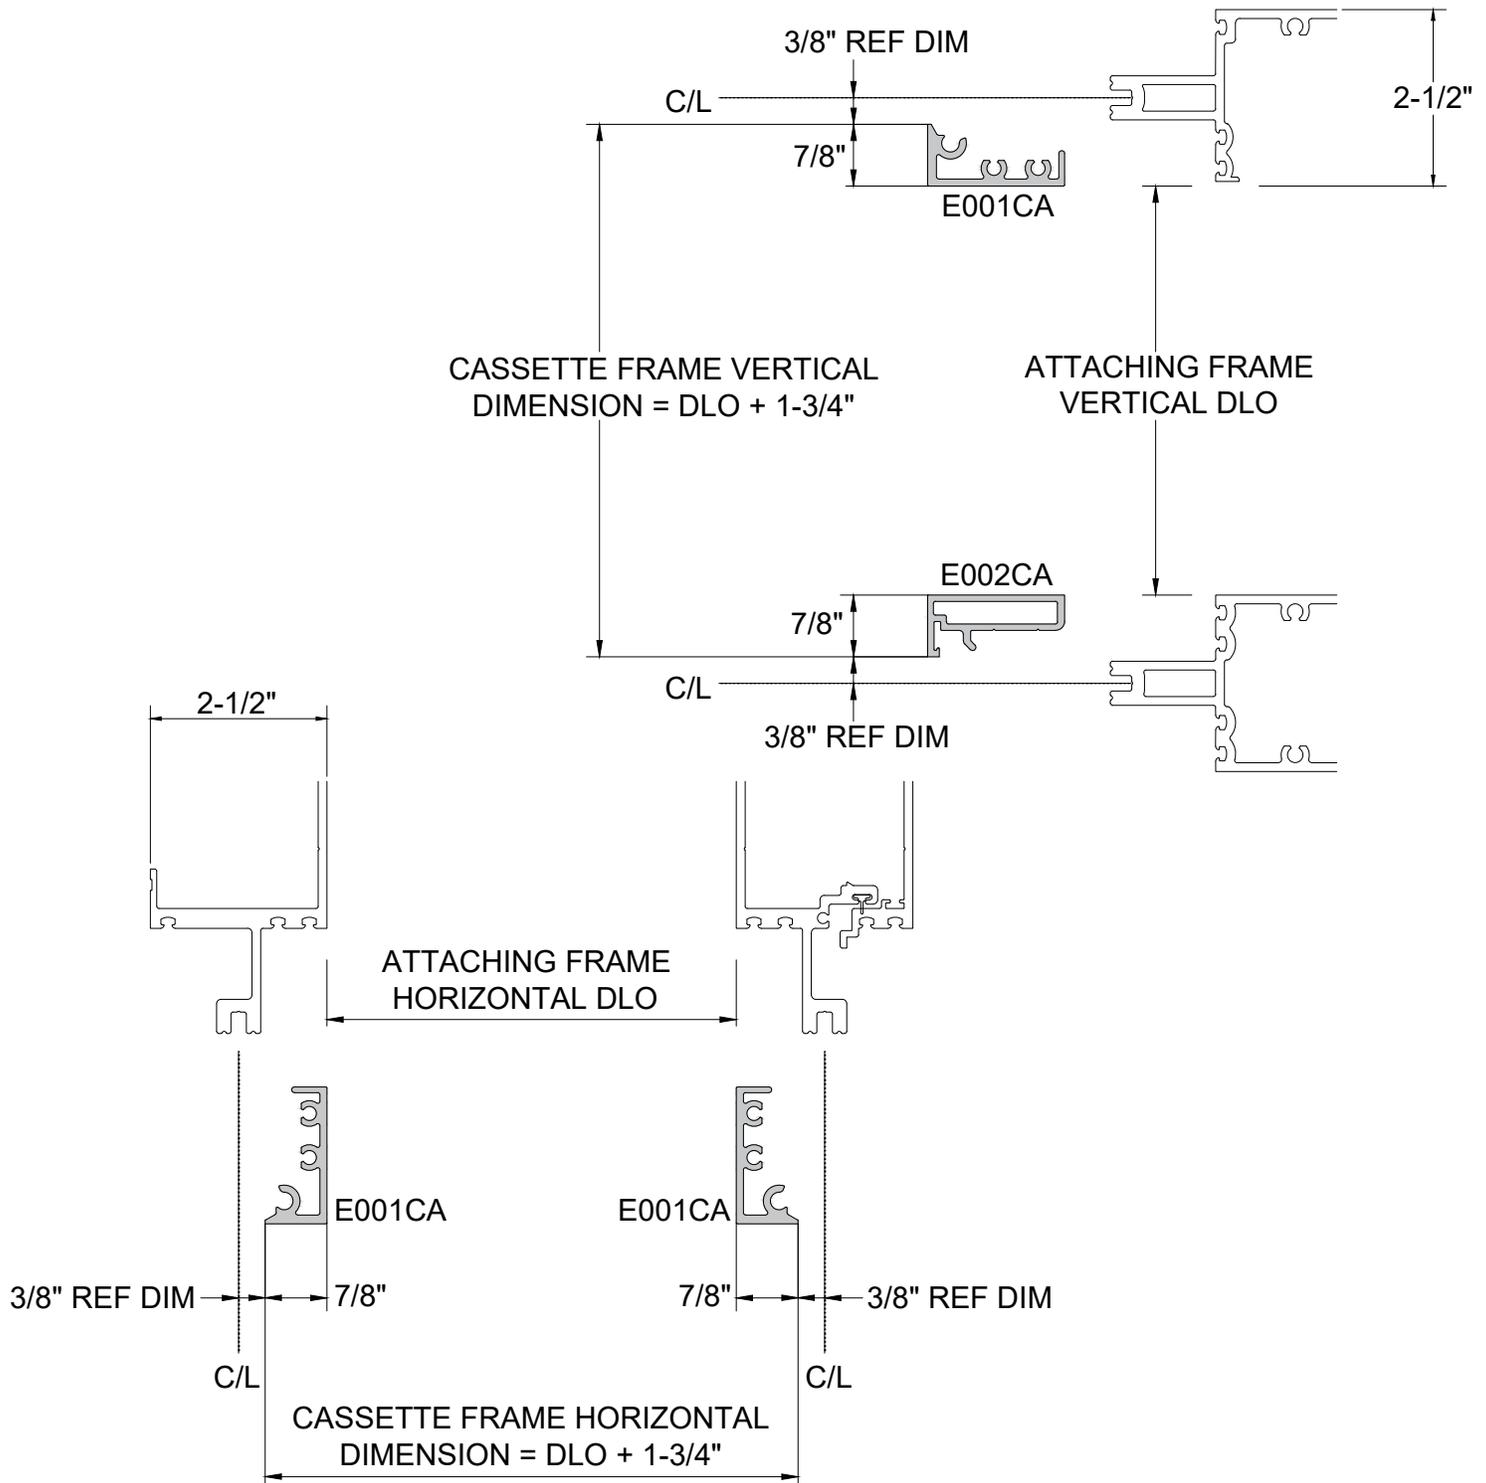

CASSETTE FRAME SIZE CALCULATOR - TYPICAL FRAMING

Cassette frame overall dimension:

Vertical frame dimension: Back member DLO plus 1-3/4"

Horizontal frame dimension: Back member frame DLO plus 1-3/4"

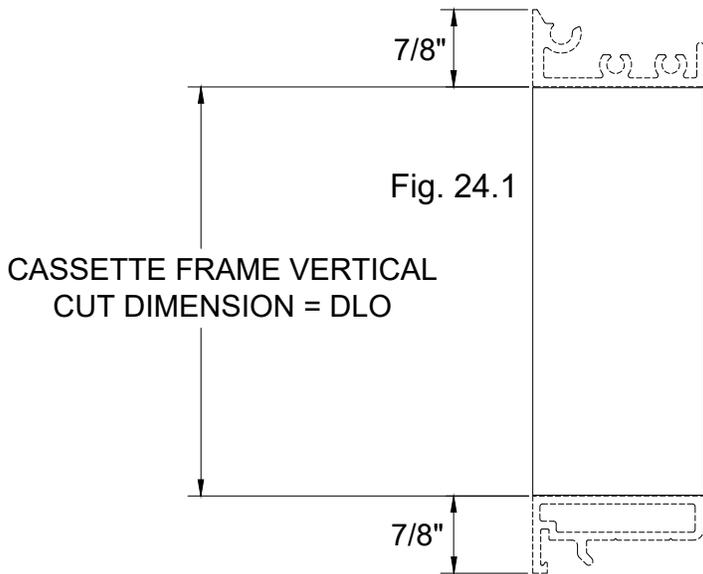

NOTE: Cassette frames sizes based on 400SS back members or 2-1/2" profile back members.

CASSETTE CUT SIZE CALCULATOR - TYPICAL FRAMING

Cassette frame member Vertical / Horizontal cut size:

Vertical frame member cut size = DLO of attaching frame

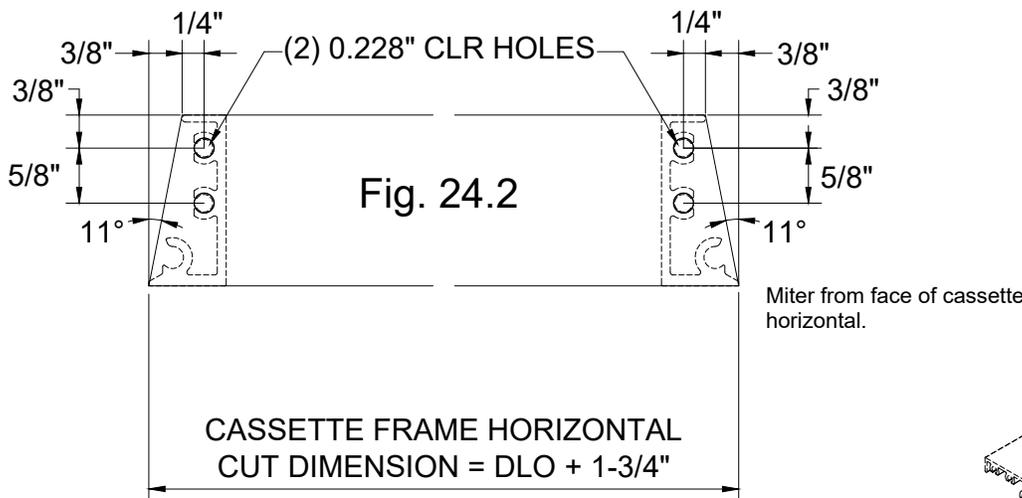

Horizontal frame member cut size = DLO plus 1-3/4" of attaching frame

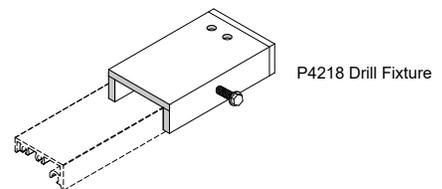

CASSETTE FRAME VERTICAL
 CUT DIMENSION = DLO

VERTICAL FRAME SIZE CALCULATOR

- STEP 1: Cut vertical (jamb) frame E001CA to calculated vertical cut size, Fig. 23.1.
- STEP 2: Cut horizontal head frame E001CA to calculated cut size mitering each end 11 degrees each end as shown at Fig. 23.2.
- STEP 3: Cut horizontal sill frame E002CA to calculated cut size mitering each end 11 degrees each end as shown at Fig. 23.2.

HORIZONTAL FRAME CUT and LAYOUT SECTION
 Standard Framing

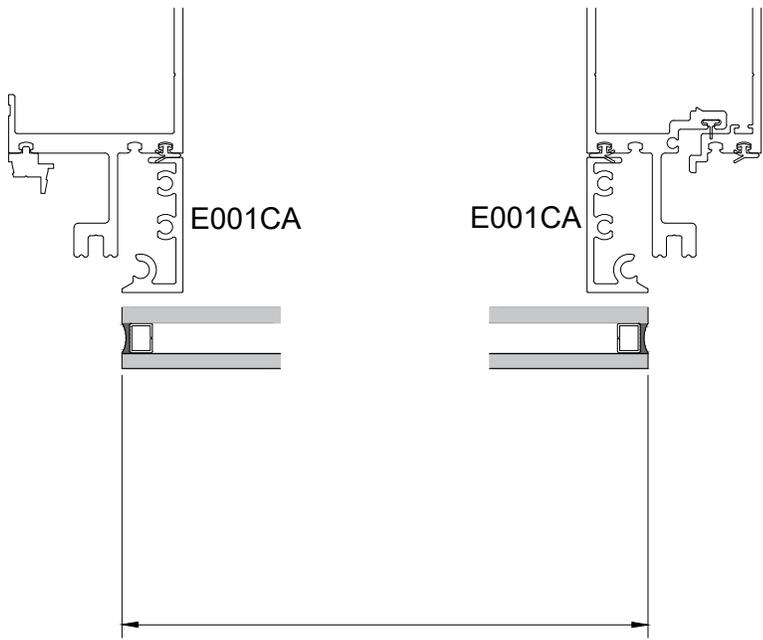

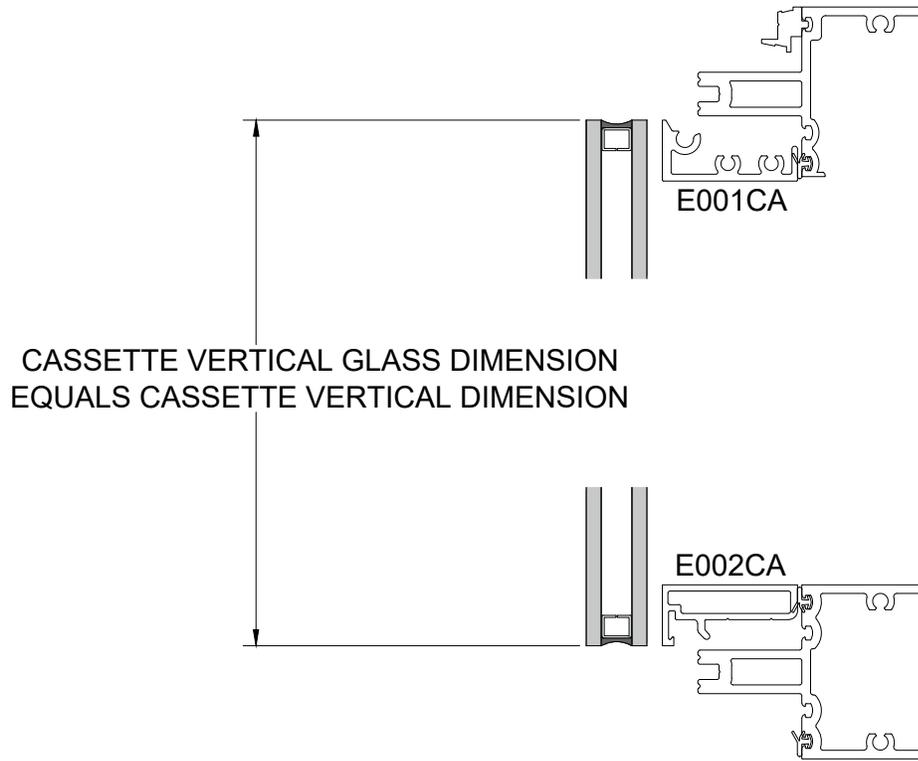

Assemble hole location as outlined below or drill fixture P4218 is available to assist with assemble hole location.

CASSETTE GLASS SIZE CALCULATOR - TYPICAL FRAMING

Cassette frame overall glass size:

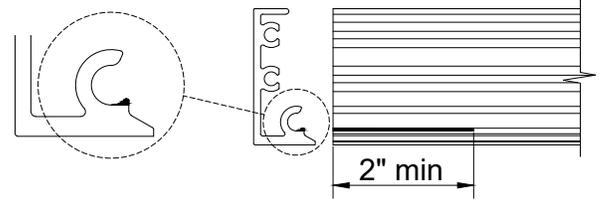

Vertical glass size = Back member DLO plus 1-3/4"

Horizontal glass size = Back member DLO plus 1-3/4"

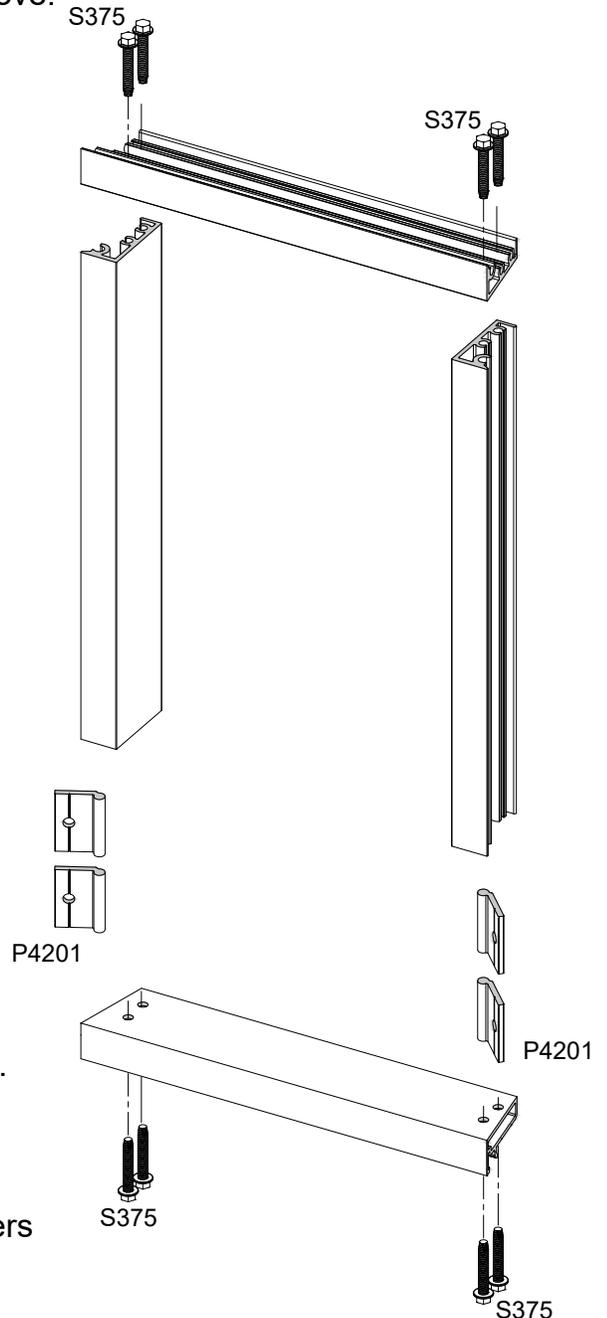

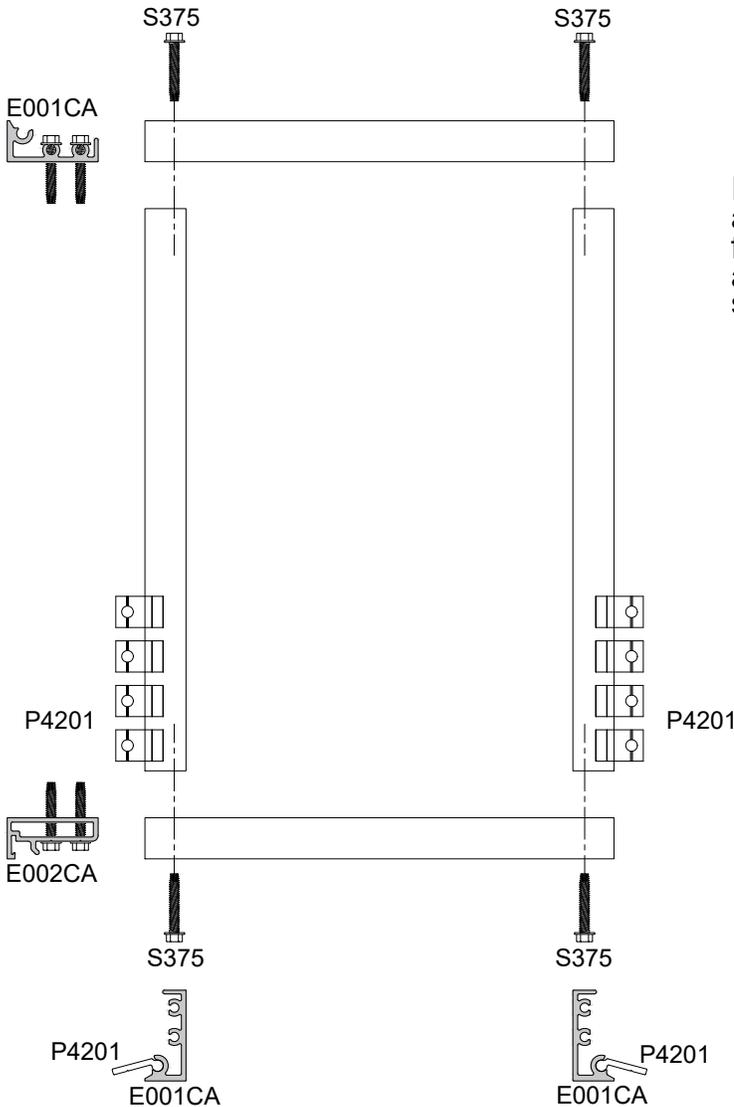

CASSETTE FRAME ASSEMBLY- TYPICAL FRAMING

ALTERNATE JAMB ANCHOR INSTALLATION

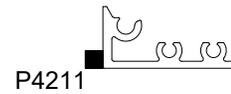

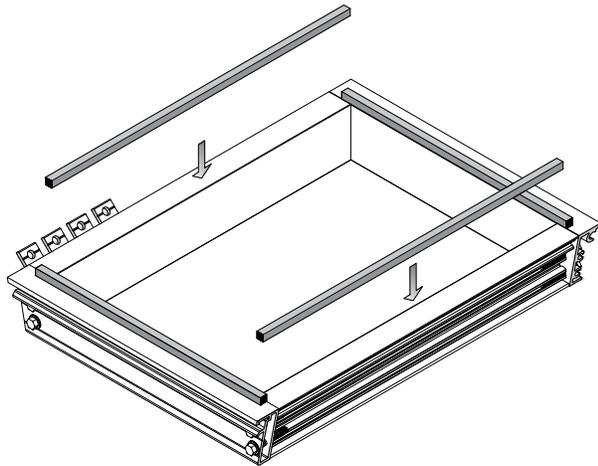

If the P4201 anchors are to be loaded in the jambs after the cassette frame had been assembled, the fabricator will need to remove the portion of the anchor receiver at the head of the jamb frames as shown above.

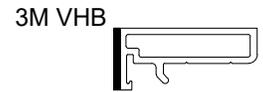

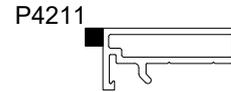

CASSETTE FRAME ASSEMBLY:

- STEP 1: Layout head, sill and jambs on table for assembly.
- STEP 2: Attach sill frame to jamb frames using S375 fasteners.
- STEP 3: Slide correct number of P4201 jamb anchors into jamb anchor receivers. Jamb anchor count equals overall jamb dimension divided by 12" plus one.
(ex: 72" jamb equals 6 anchors plus one...7 total)
- STEP 4: Attach head frame to jamb frames using S375 fasteners completing frame assembly.

CASSETTE FRAME GLAZING

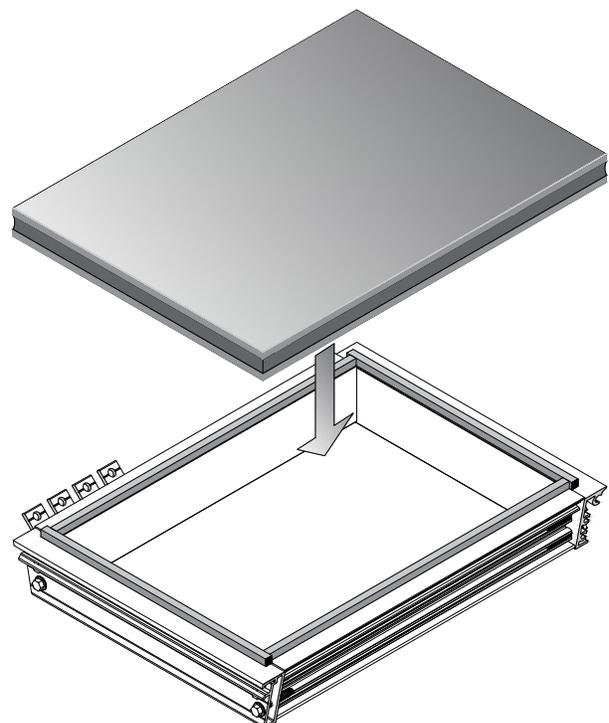

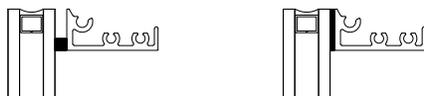

Apply tape at DLO head,
sill and jambs.

NOTE: If using 3M VHB glazing tape contact
3M for training certification and approvals.

CASSETTE GLAZING PREP and GLASS INSTALLATION

- STEP 1: Lay assembled cassette frame on glazing table and square frame, hold frame in square position.
- STEP 2: Using Isopropyl 70/30 mixture two towel wipe, clean face of cassette frame that will glazed against.
- STEP 3: Install P4211 (1/4" x 1/4") Norton tape adhesive side to cassette face.
- STEP 4: Using Isopropyl 70/30 mixture two towel wipe, clean surface of glass that will come in contact with silicone.
- STEP 5: Set glass to frame aligning edges of glass with frame.
(note: glass size will vary, balance overage / under around frame)

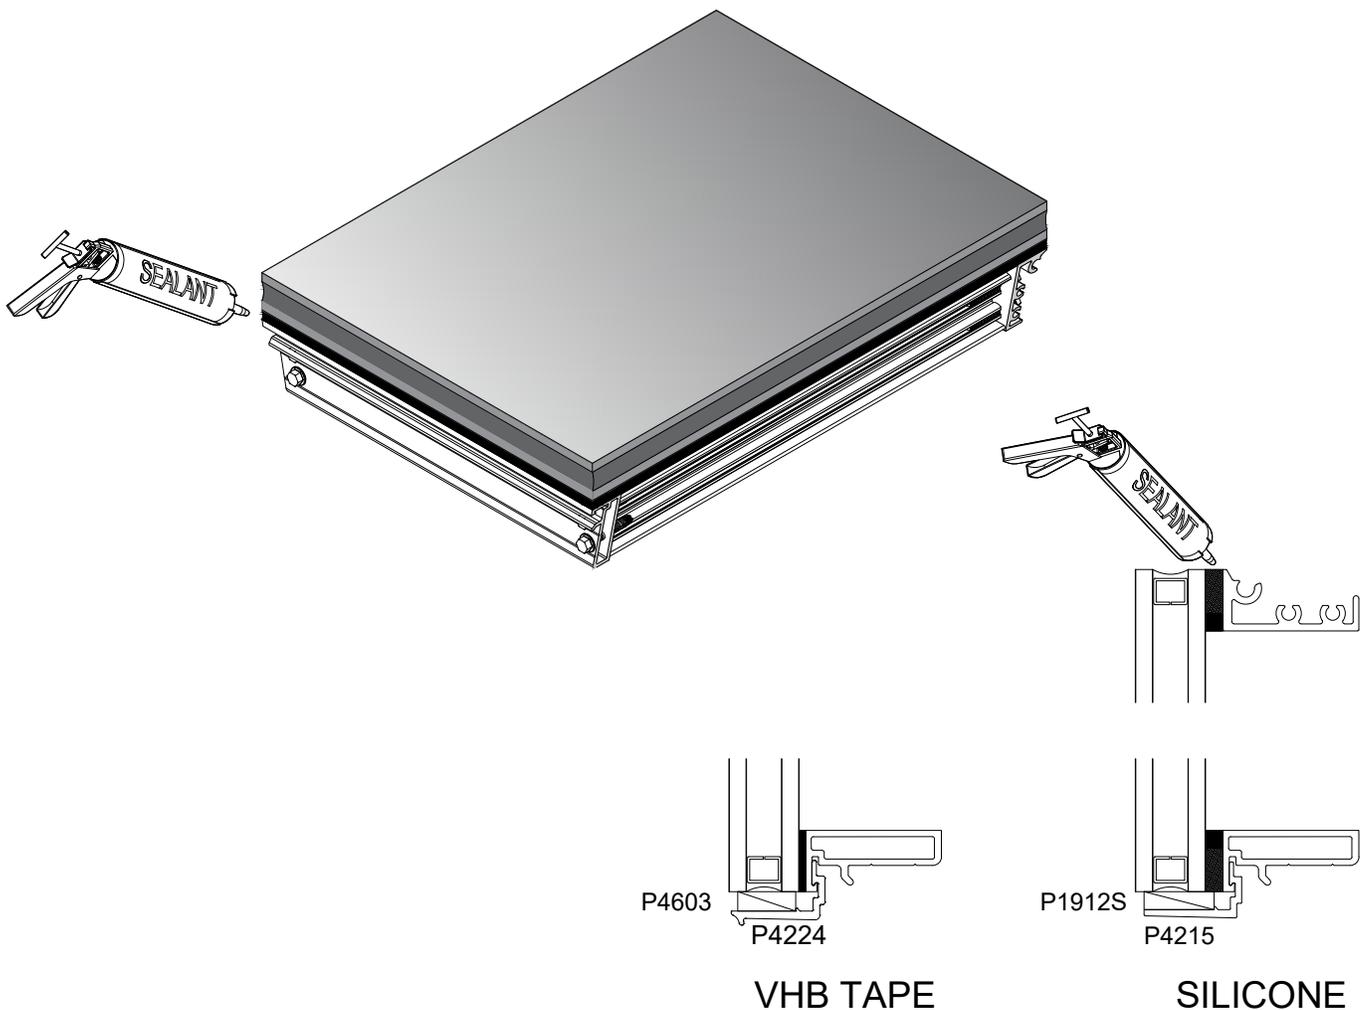

CASSETTE FRAME GLAZING - continued

CASSETTE SSG GLAZING

NOTE: Glazing contractor is responsible for selection and proper installation of silicone for glass to cassette attachment / glazing. Follow manufacturer's recommendations for application...environmental conditions, curing time and handling.
(Dow 995 was used by Tubelite for performance mock up)

- STEP 1: Fill void between cassette frame and glass with silicone.
- STEP 2: Tool silicone around perimeter of frame.
- STEP 3: Install setting block chair P4215 and setting block P1912S at quarter points. (Use setting block chair P4224 and P4603 setting block at quarter points when using VHB tape glazing)
- STEP 4: Move unit making sure not to disturb glass / cassette frame and let cure per manufactures' recommendations.

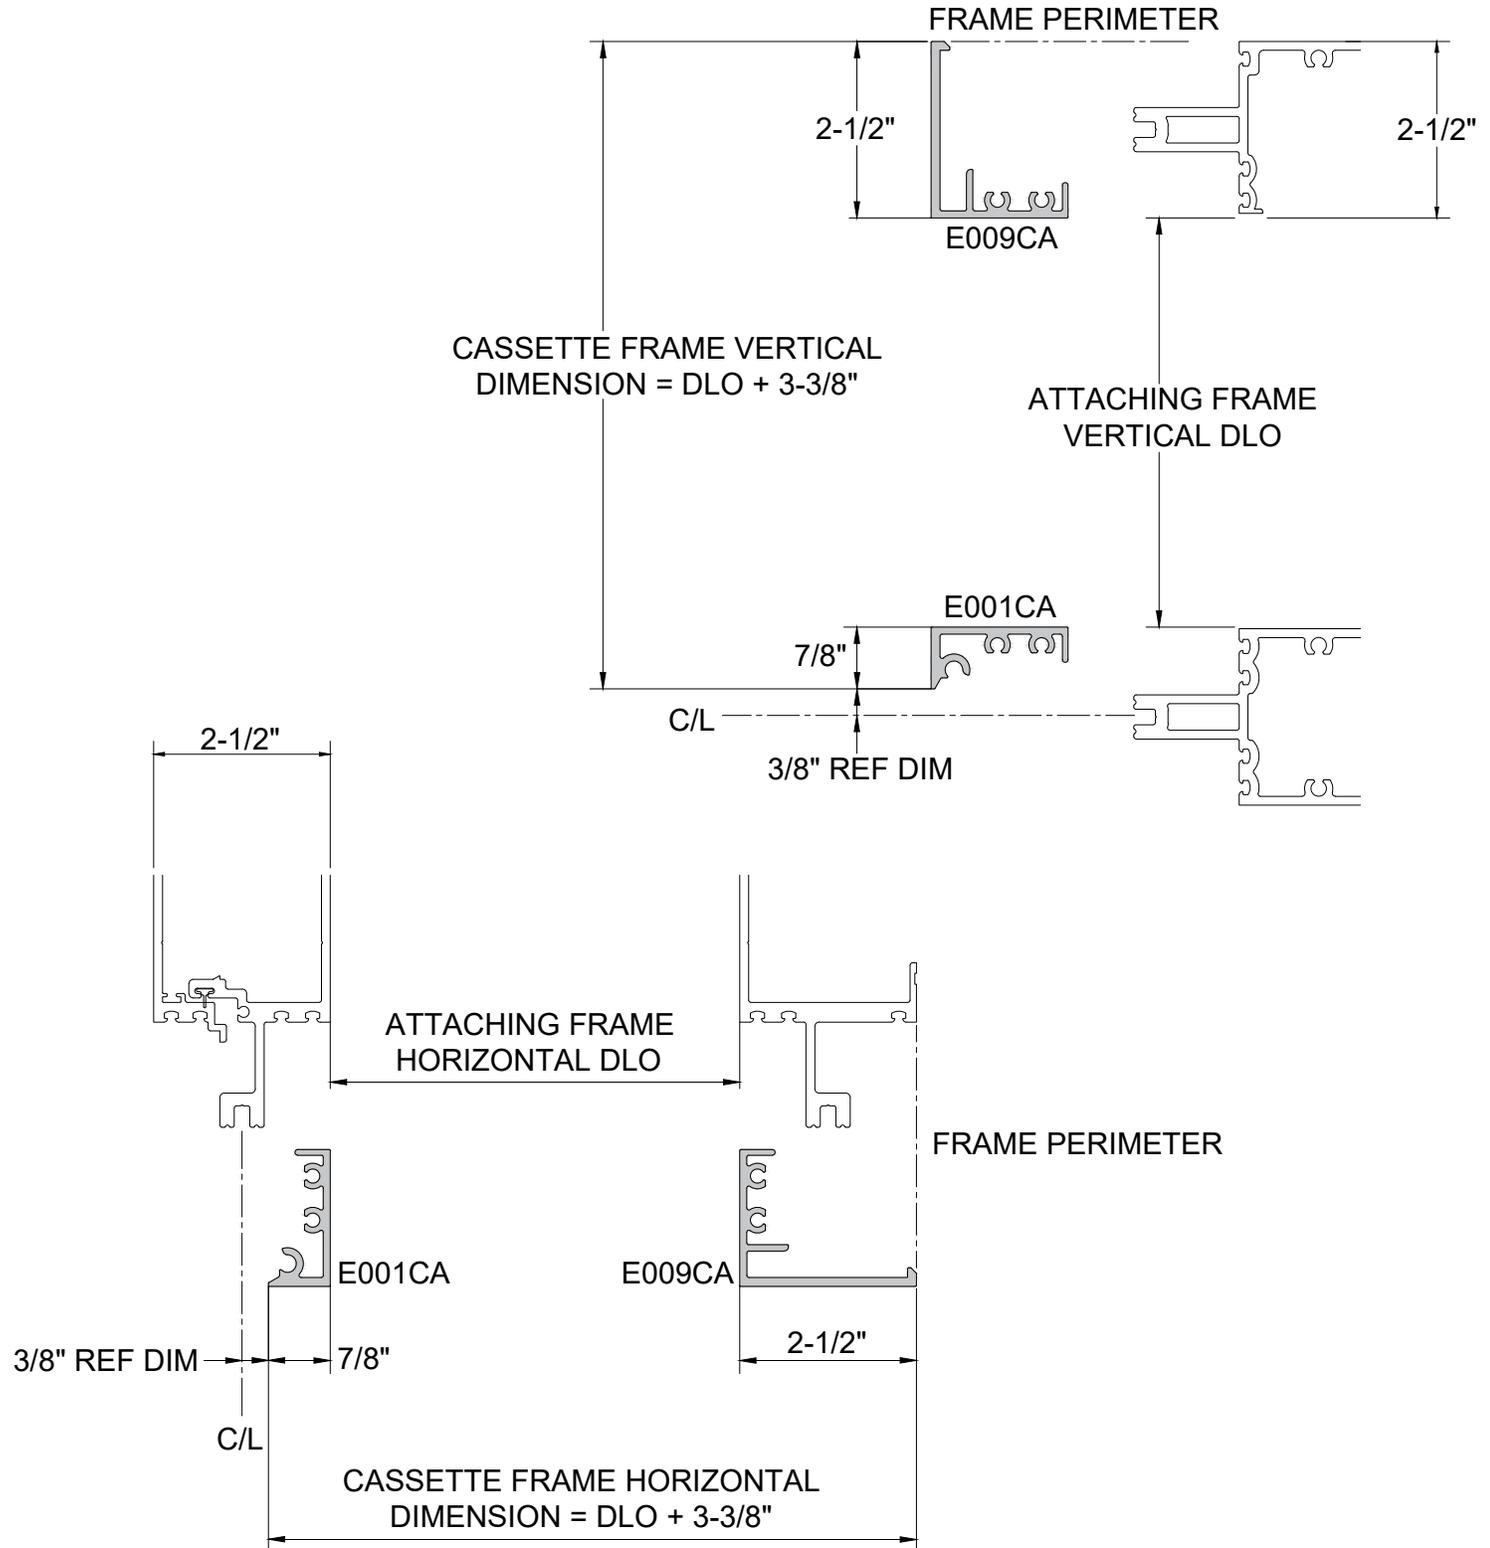

**CASSETTE FRAME SIZE CALCULATOR -
 "Glass-to-Edge" Head / Jamb**

Cassette frame overall dimension:

Vertical frame dimension: Back member DLO plus 3-3/8"

Horizontal frame dimension: Back member frame DLO plus 3-3/8"

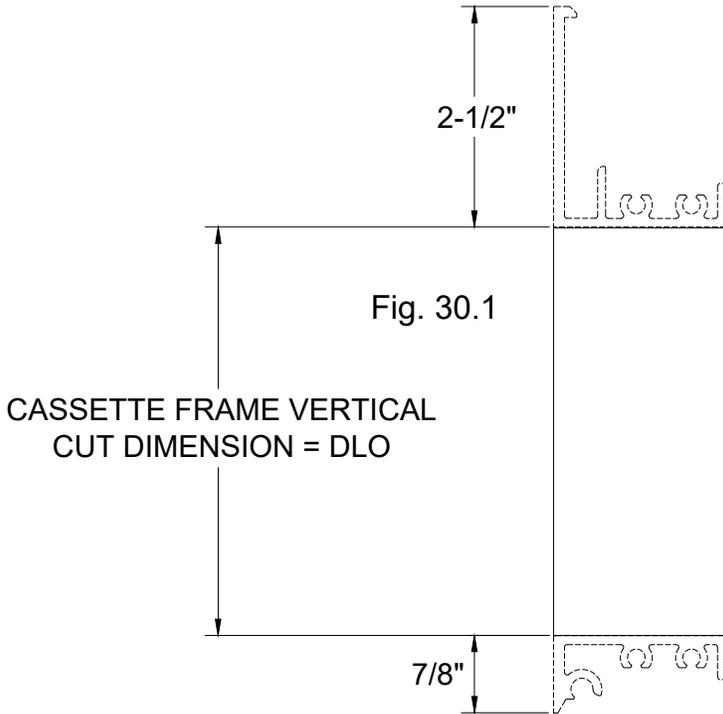

NOTE: Cassette frames sizes based on 400SS back members or 2-1/2" profile back members.

**CASSETTE FRAME CUT SIZE CALCULATOR -
 "Glass-to-Edge" Head / Jamb**

Cassette frame member Vertical / Horizontal cut size:

Vertical frame member cut size = DLO of attaching frame

Horizontal frame member cut size = DLO plus 3-3/8" of attaching frame

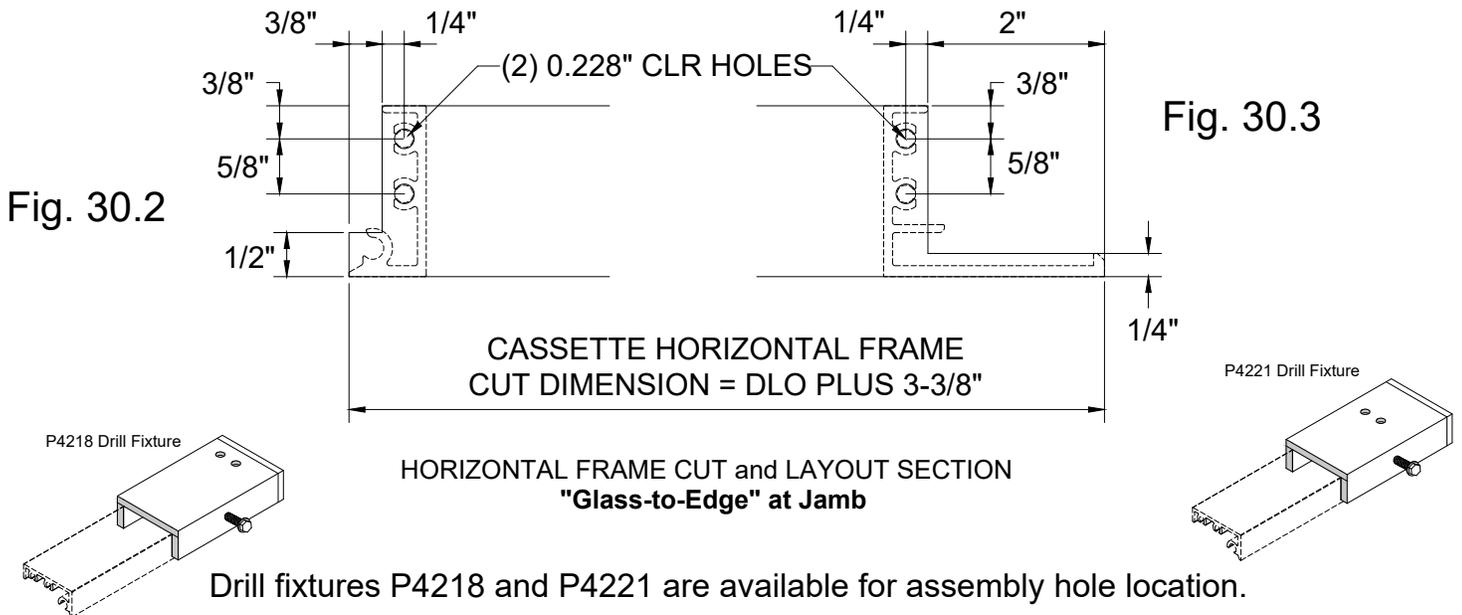

STEP 1: Cut cassette vertical (jamb) framing members E001CA and E009CA to calculated lengths. Fig. 30.1.

STEP 2: Cut cassette horizontal (head / sill) framing members E001CA and E009CA to calculated lengths.

STEP 3: Cope one end of head and sill frame to match Fig. 30.2. This end will be intermediate jamb side.

STEP 4: Cope other end of head and sill frame to match Fig. 30.3. This will be the "Glass-to-Edge" jamb side.

**VERTICAL FRAME SIZE CALCULATOR
 "Glass-to-Edge" at Head**

Drill fixtures P4218 and P4221 are available for assembly hole location.

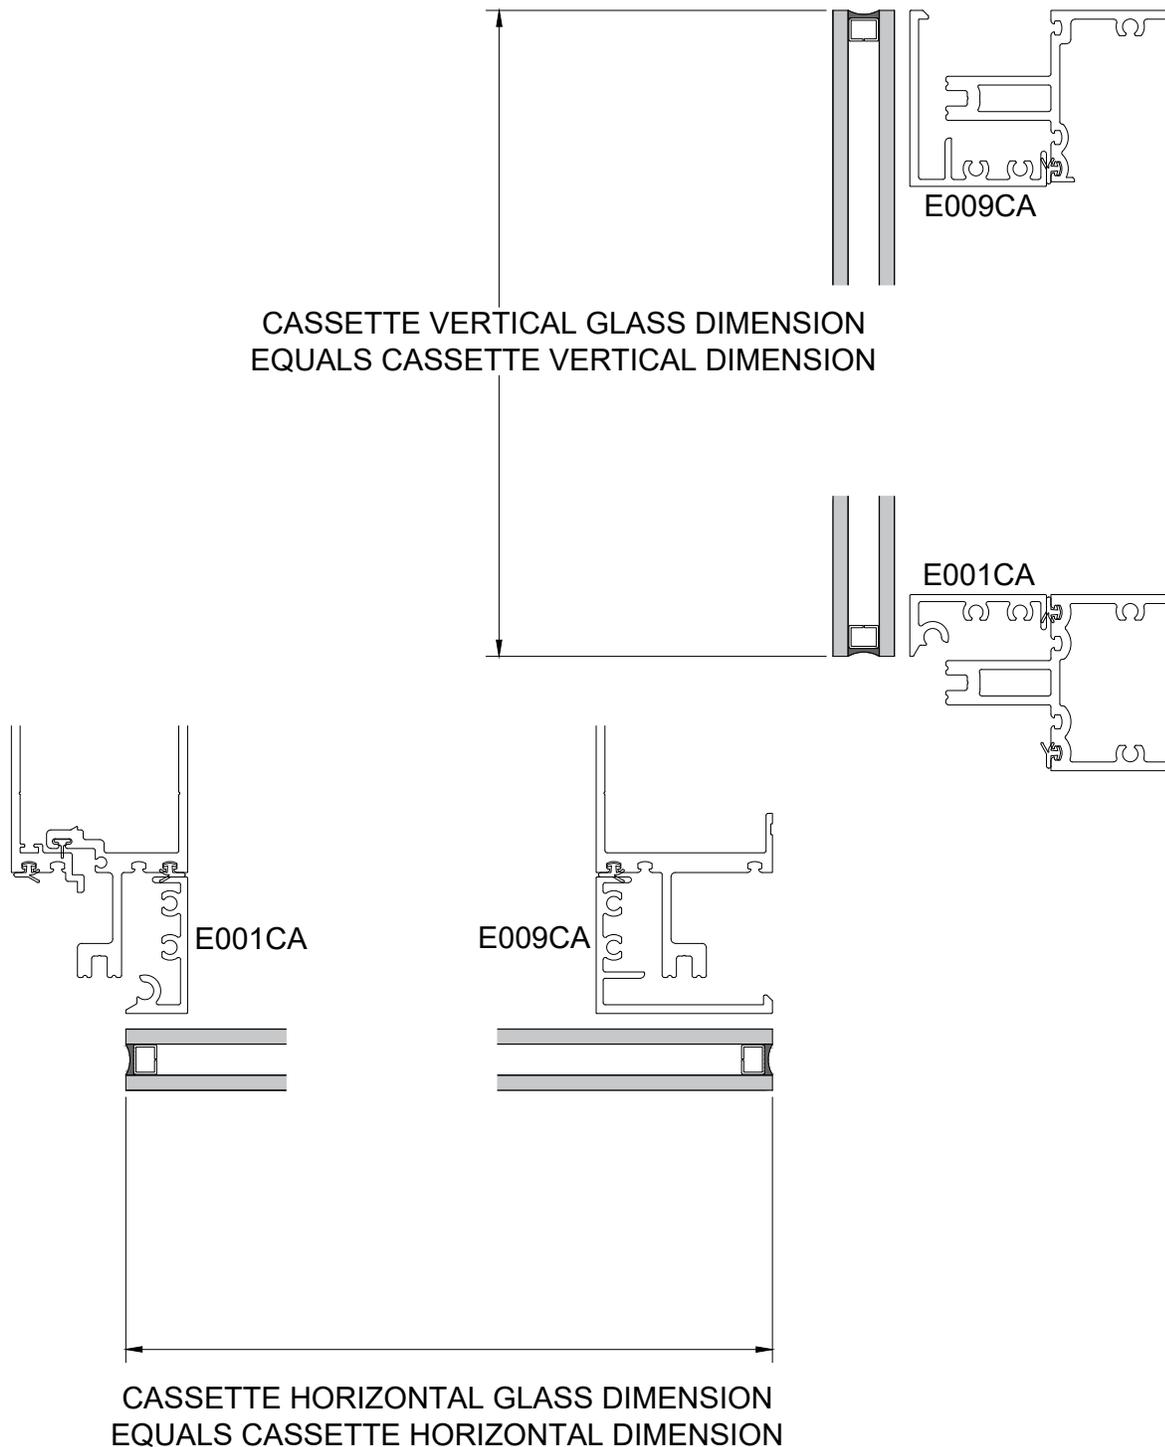

CASSETTE GLASS SIZE CALCULATOR -

"Glass-to-Edge" Head / Jamb

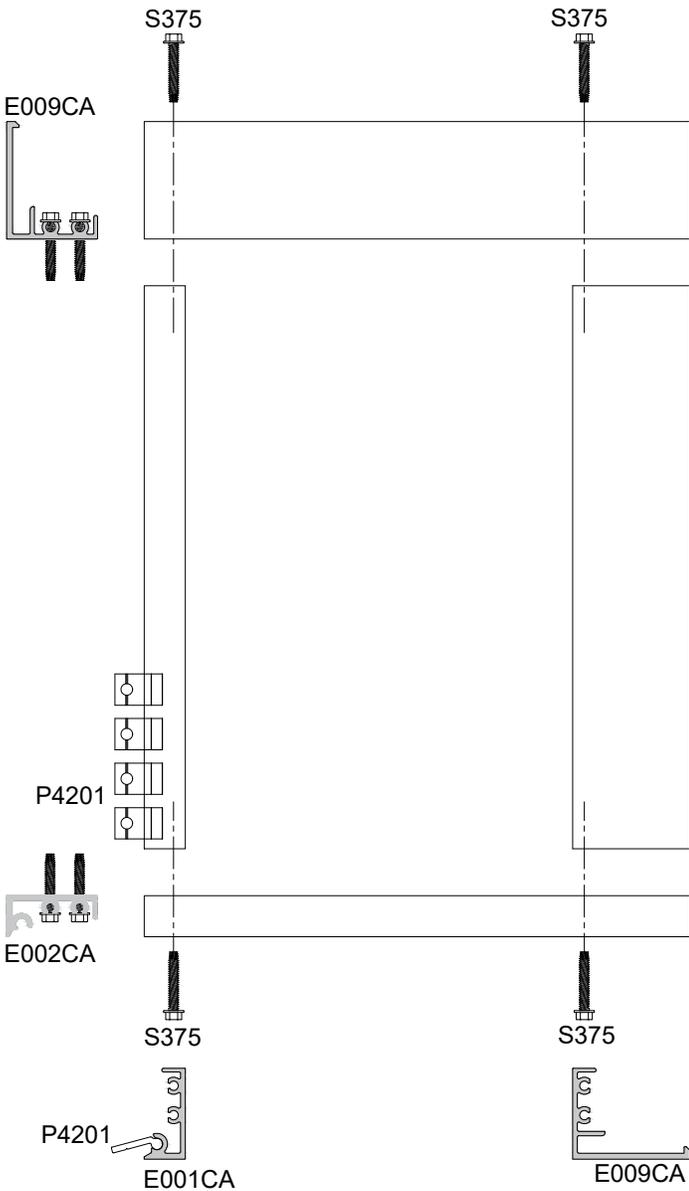

Cassette frame overall glass size:

Vertical glass size = Back member DLO plus 3-3/8"

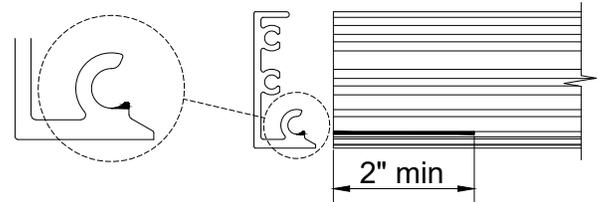

Horizontal glass size = Back member DLO plus 3-3/8"

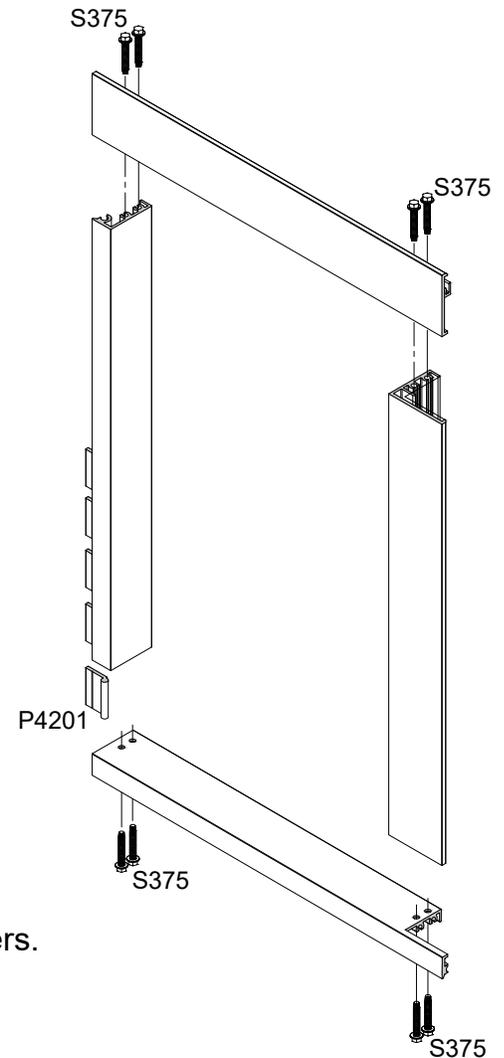

CASSETTE FRAME ASSEMBLY - "Glass-to-Edge" Head / Jamb

ALTERNATE JAMB ANCHOR INSTALLATION

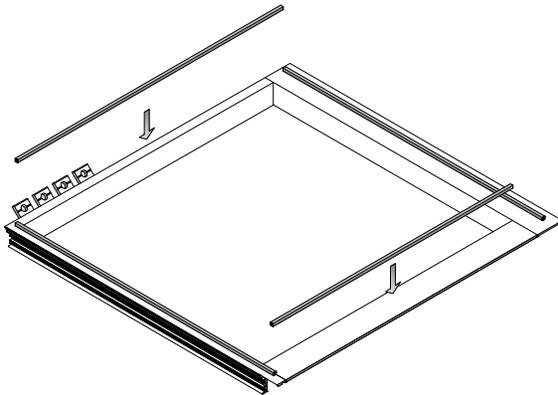

If the P4201 anchors are to be loaded in the jambs after the cassette frame had been assembled, the fabricator will need to remove the portion of the anchor receiver at the head of the jamb frames as shown above.

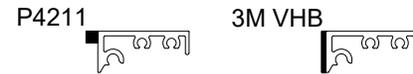

CASSETTE FRAME ASSEMBLY:

- STEP 1: Layout head, sill and jambs on table for assembly.
- STEP 2: Attach sill frame to jamb frames using S375 fasteners.
- STEP 3: Slide correct number of P4201 jamb anchors into jamb anchor receivers. Jamb anchor count equals overall jamb dimension divided by 12" plus one.
(ex: 72" jamb equals 6 anchors plus one...7 total)
- STEP 4: Attach head frame to jamb frames using S375 fasteners completing frame assembly.

CASSETTE FRAME GLAZING - "Glass-to-Edge" Head / Jamb

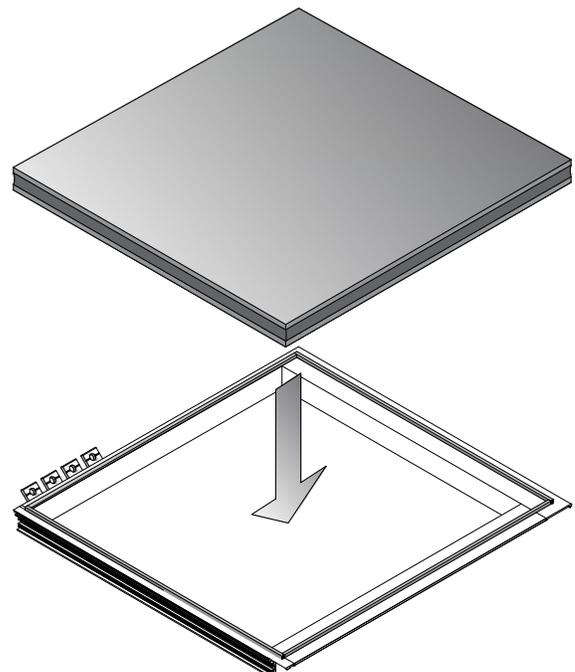

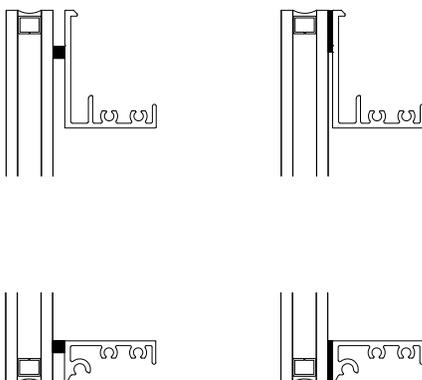

Apply tape at "V" groove and jamb. Follow DLO at sill and opposite jamb.

NOTE: If using 3M VHB glazing tape contact 3M for training certification and approvals.

CASSETTE GLAZING PREP and GLASS INSTALLATION

- STEP 1: Lay assembled cassette frame on glazing table and square frame, hold frame in square position.
- STEP 2: Using Isopropyl 70/30 mixture two towel wipe, clean face of cassette frame that will glazed against.
- STEP 3: Install P4211 (1/4" x 1/4") Norton tape adhesive side to cassette face.
- STEP 4: Using Isopropyl 70/30 mixture two towel wipe, clean surface of glass that will come in contact with silicone.
- STEP 5: Set glass to frame aligning edges of glass with frame.
(note: glass size will vary, balance overage / under around frame)

CASSETTE FRAME GLAZING - "Glass-to-Edge" Head / Jamb - cont.

CASSETTE SSG GLAZING

NOTE: Glazing contractor is responsible for selection and proper installation of silicone for glass to cassette attachment / glazing. Follow manufacturer's recommendations for application...environmental conditions, curing time and handling.
(Dow 995 was used by Tubelite for performance mock up)

- STEP 1: Fill void between cassette frame and glass with silicone.
- STEP 2: Tool silicone around perimeter of frame.
- STEP 3: Prior to installing setting block chair P4217 install correct number of center anchors P4201 as shown in Fig. 34.1.
- STEP 4: Install setting block chair P4217 and setting block P1912S at quarter points. (Use setting block chair P4225 and P4603 setting block at quarter points when using VHB tape glazing)
- STEP 5: Move unit making sure not to disturb glass / cassette frame and let cure per manufactures' recommendations.

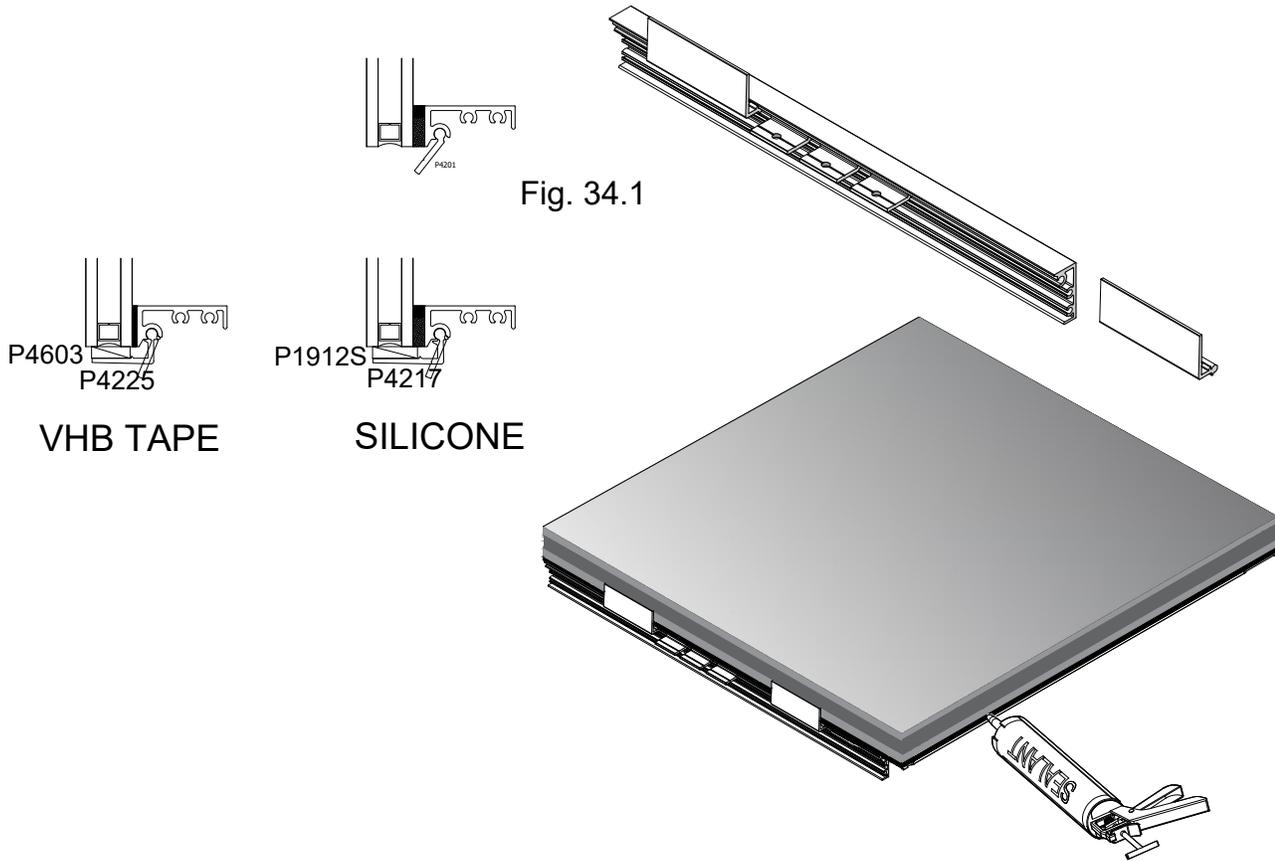

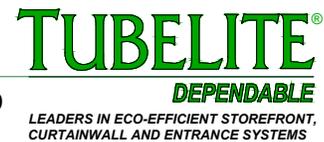

Fig. 34.1

VHB TAPE

SILICONE

400 4-SIDE SSG CASSETTE on 400SS BACK MEMBERS

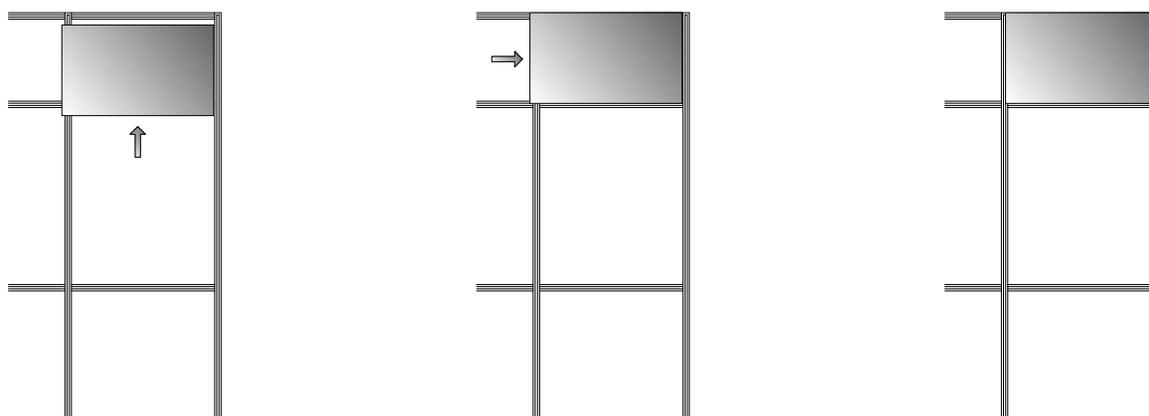

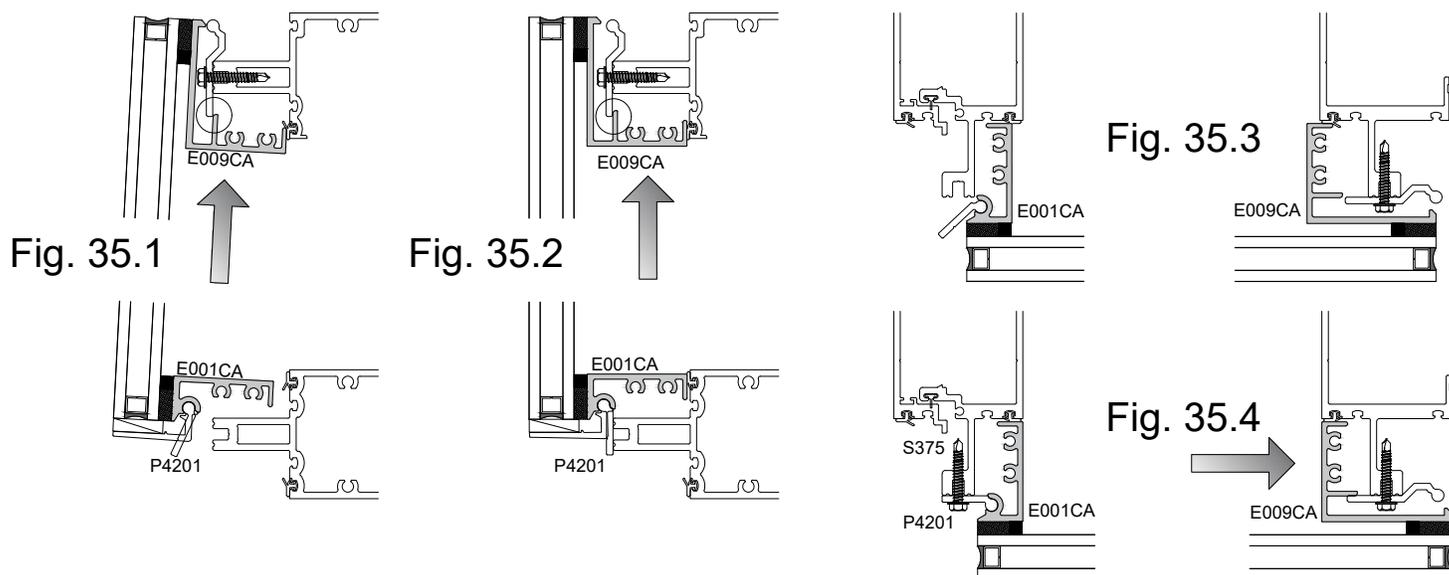

CASSETTE FRAME INSTALLATION - "Glass-to-Edge" Head / Jamb

NOTE: Cassette framing consisting of both Head and Jamb "Glass-to-Edge" frames must be installed prior to adjacent frames and frame directly below.

- STEP 1: Position the cassette frame at a slight angle to the head framing as shown in Fig.35.1 and off the jamb anchor as shown in Fig. 35.3 with the frame shifted away from the perimeter.
- STEP 2: Roll the sill of the cassette frame towards the sill back member and slide up engaging the head anchor as shown in Fig. 35.2.
- STEP 3: Slide the cassette frame horizontally to engage the jamb anchor as shown in Fig. 35.4.
- STEP 4: Attach sill anchors P4201 at 12" o/c and no more than 2" from ends.

NOTE: Cassette unit below must use anchor P4201 at sill versus P4203 for installation clearance. Refer to PERIMETER SHEETS - DTL. 2B.

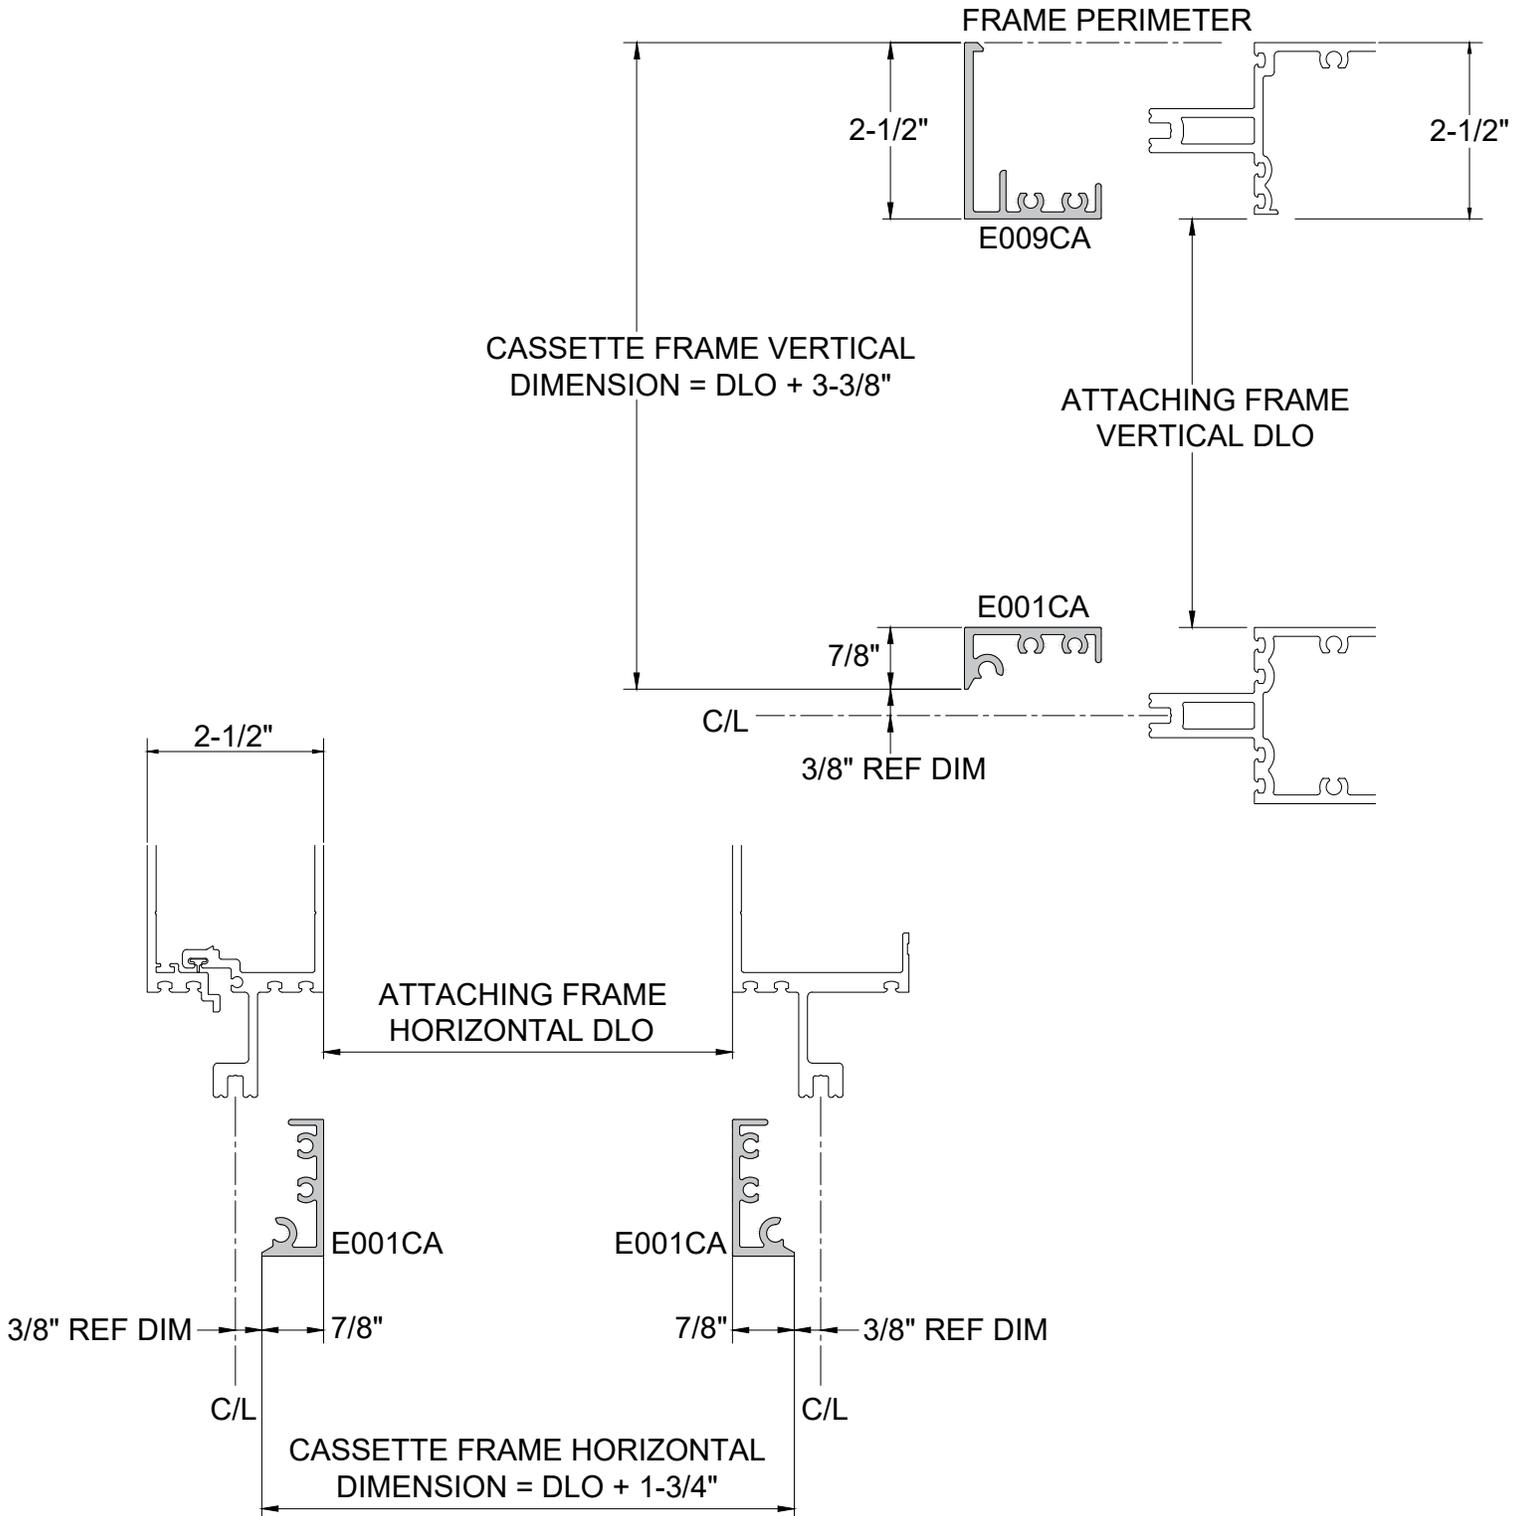

Partial elevation showing cassette frame movements for installation

CASSETTE FRAME SIZE CALCULATOR - "Glass-to-Edge" Head

Cassette frame overall dimension:

Vertical frame dimension: Back member DLO plus 3-3/8"

Horizontal frame dimension: Back member frame DLO plus 1-3/4"

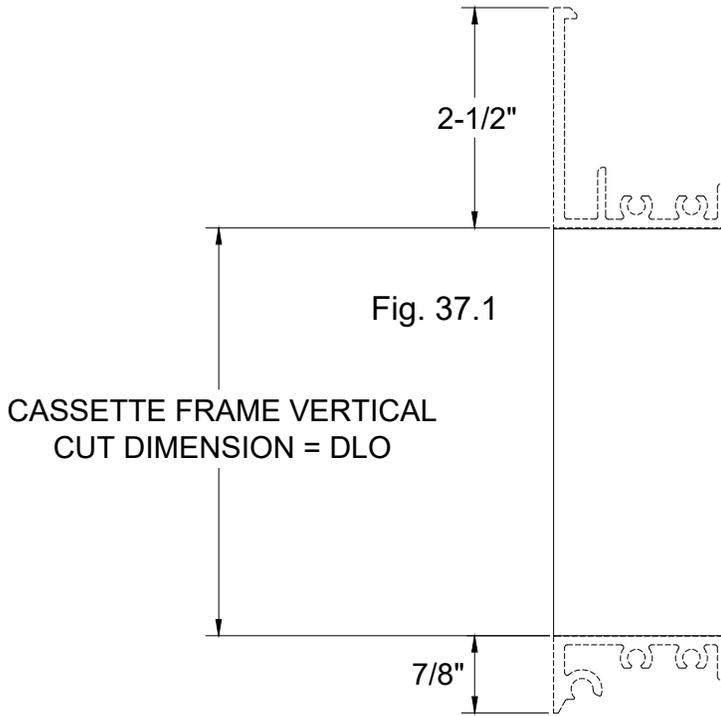

NOTE: Cassette frames sizes based on 400SS back members or 2-1/2" profile back members.

CASSETTE FRAME CUT SIZE CALCULATOR
"Glass-to-Edge" Head

Cassette frame member Vertical / Horizontal cut size:

Vertical frame member cut size = DLO of attaching frame

Horizontal frame member cut size = DLO plus 1-3/4" of attaching frame

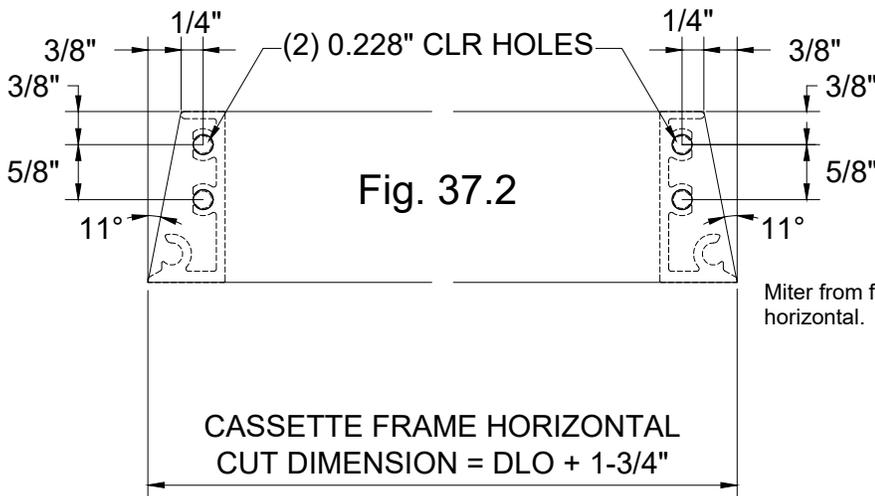

STEP 1: Cut cassette vertical (jamb) framing members E001CA to calculated lengths. Fig. 37.1.

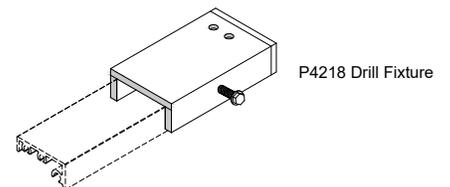

STEP 2: Cut cassette head horizontal E009CA member to calculated length then miter both ends 11 degrees from front face of frame shown at Fig. 37.2.

STEP 3: Cut cassette sill horizontal E001CA member to calculated length then miter both ends 11 degrees from front face of frame shown at Fig. 37.2.

VERTICAL FRAME SIZE CALCULATOR
"Glass-to-Edge" at Head

Miter from face of cassette horizontal.

HORIZONTAL FRAME CUT and LAYOUT SECTION
 Standard Framing

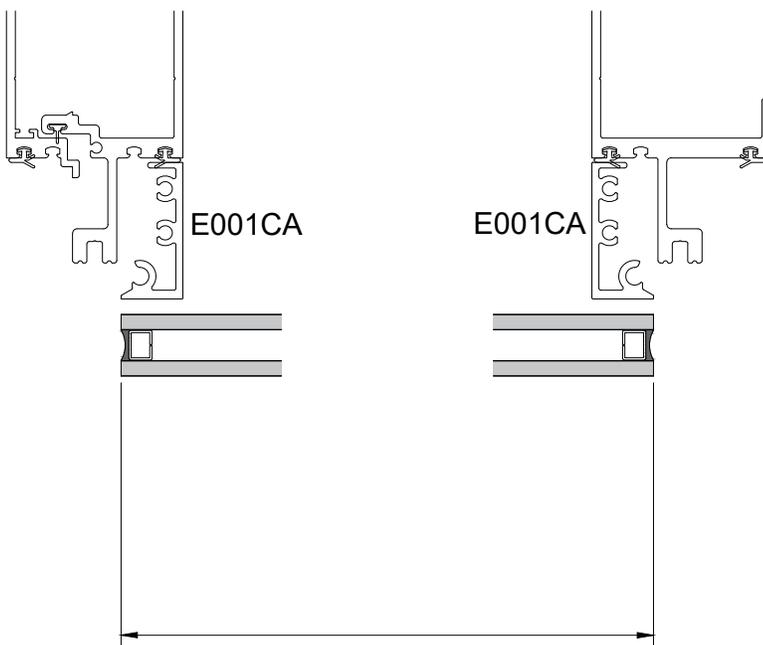

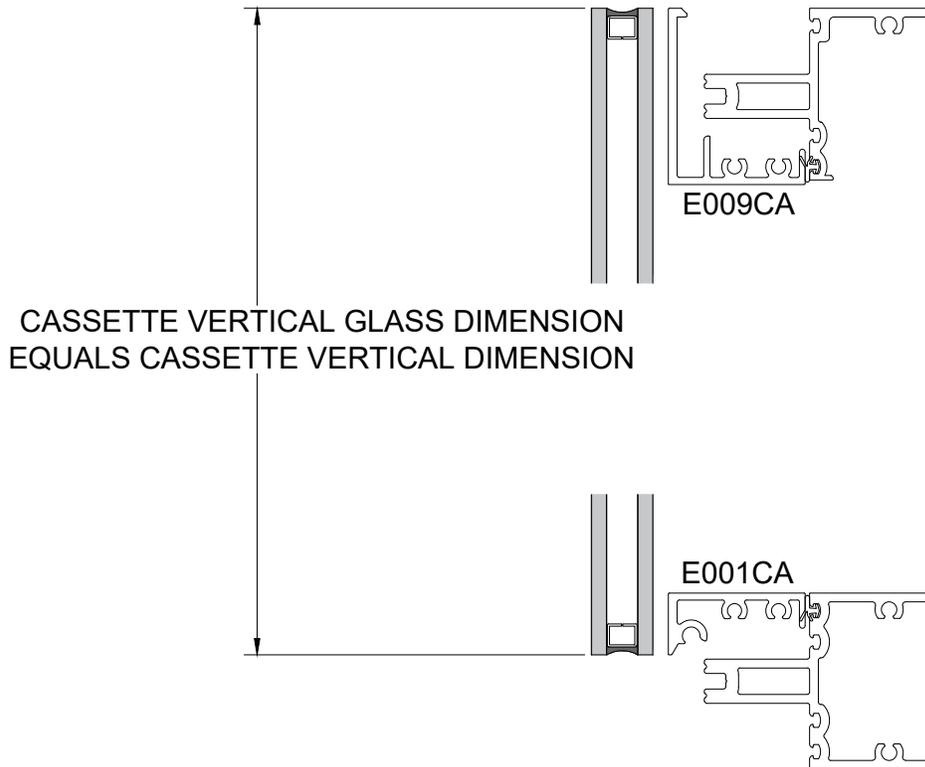

Assemble hole location as outlined below or drill fixture P4218 is available to assist with assemble hole location.

CASSETTE GLASS SIZE CALCULATOR - "Glass-to-Edge" Head

Cassette frame overall glass size:

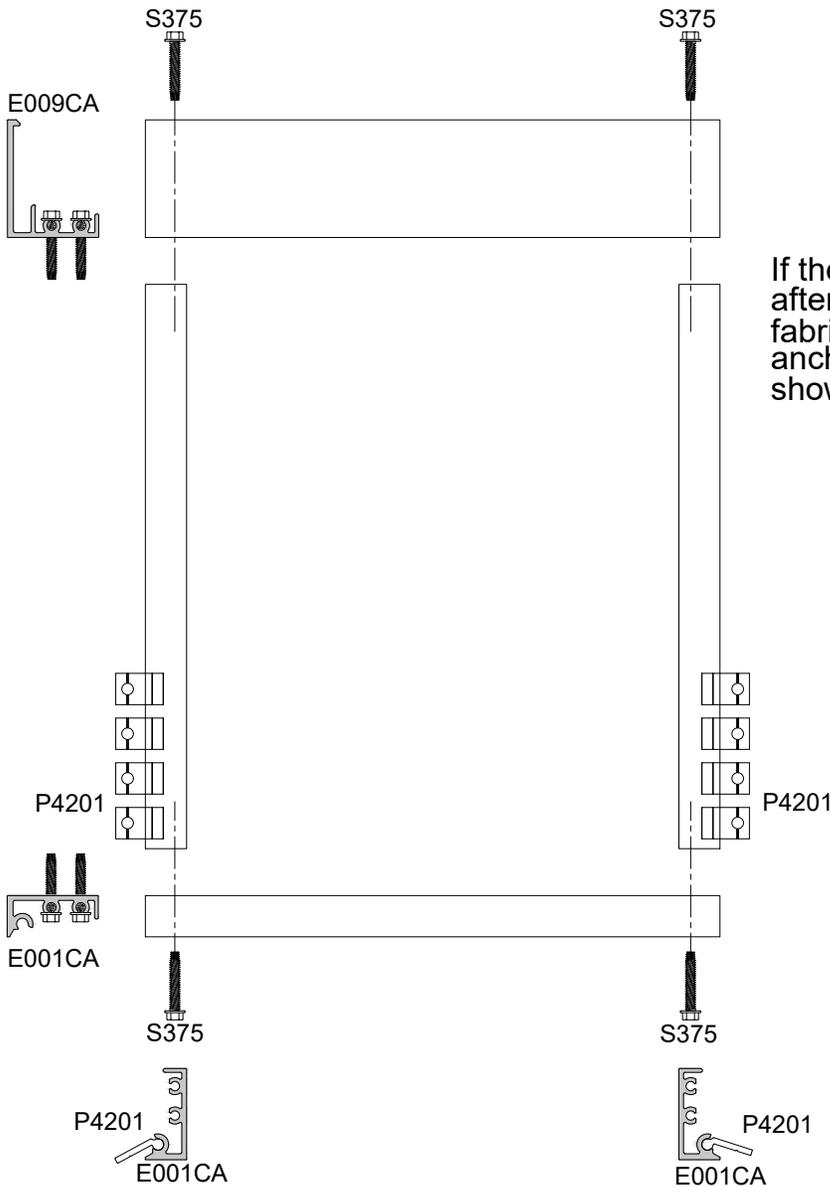

Vertical glass size = Back member DLO plus 3-3/8"

Horizontal glass size = Back member DLO plus 1-3/4"

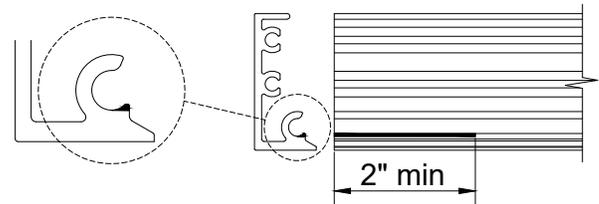

CASSETTE HORIZONTAL GLASS DIMENSION
EQUALS CASSETTE HORIZONTAL DIMENSION

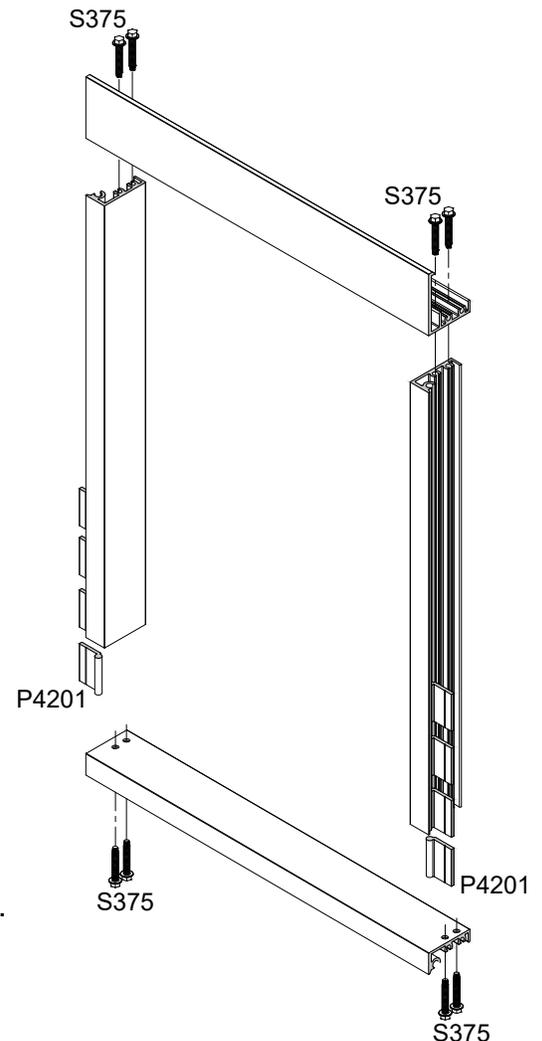

CASSETTE FRAME ASSEMBLY - "Glass-to-Edge" Head

ALTERNATE JAMB ANCHOR INSTALLATION

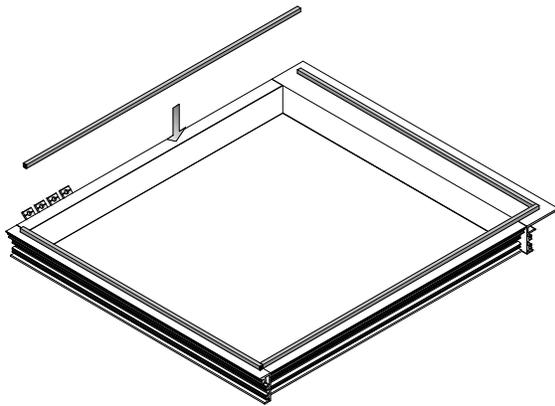

If the P4201 anchors are to be loaded in the jambs after the cassette frame had been assembled, the fabricator will need to remove the portion of the anchor receiver at the head of the jamb frames as shown above.

CASSETTE FRAME ASSEMBLY:

- STEP 1: Layout head, sill and jambs on table for assembly.
- STEP 2: Attach sill frame to jamb frames using S375 fasteners.
- STEP 3: Slide correct number of P4201 jamb anchors into jamb anchor receivers. Jamb anchor count equals overall jamb dimension divided by 12" plus one. (ex: 72" jamb equals 6 anchors plus one...7 total)
- STEP 4: Attach head frame to jamb frames using S375 fasteners completing frame assembly.

CASSETTE FRAME GLAZING - "Glass-to-Edge" Head

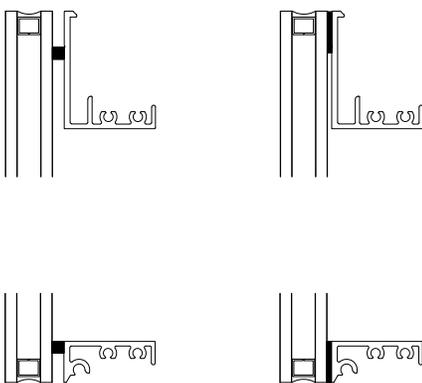

Apply tape at "V" groove head and jamb. Follow DLO at sill and opposite jamb.

NOTE: If using 3M VHB glazing tape contact 3M for training certification and approvals.

CASSETTE GLAZING PREP and GLASS INSTALLATION

- STEP 1: Lay assembled cassette frame on glazing table and square frame, hold frame in square position.
- STEP 2: Using Isopropyl 70/30 mixture two towel wipe, clean face of cassette frame that will glazed against.
- STEP 3: Install P4211 (1/4" x 1/4") Norton tape adhesive side to cassette face.
- STEP 4: Using Isopropyl 70/30 mixture two towel wipe, clean surface of glass that will come in contact with silicone.
- STEP 5: Set glass to frame aligning edges of glass with frame.
(note: glass size will vary, balance overage / under around frame)

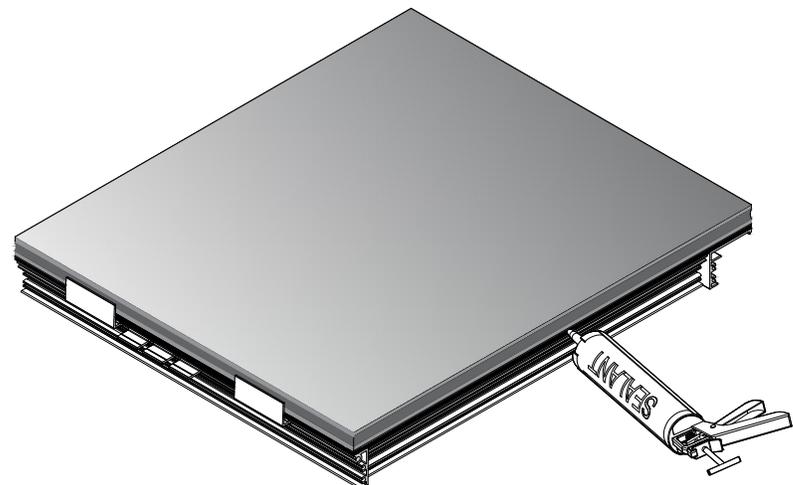

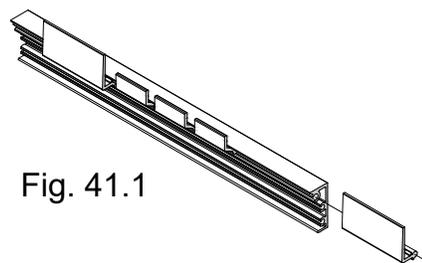

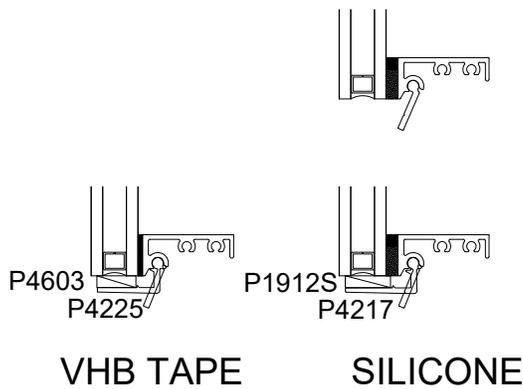

CASSETTE FRAME GLAZING - "Glass-to-Edge" Head - cont.

CASSETTE SSG GLAZING

NOTE: Glazing contractor is responsible for selection and proper installation of silicone for glass to cassette attachment / glazing. Follow manufacturer's recommendations for application...environmental conditions, curing time and handling.
(Dow 995 was used by Tubelite for performance mock up)

- STEP 1: Fill void between cassette frame and glass with silicone.
- STEP 2: Tool silicone around perimeter of frame.
- STEP 3: Prior to installing setting block chair P4217 install correct number of center anchors P4200 as shown in Fig. 41.1.
- STEP 4: Install setting block chair P4217 and setting block P1912S at quarter points. (Use setting block chair P4225 and setting block P4603 at quarter points when using VHB glazing tape.)
- STEP 5: Move unit making sure not to disturb glass / cassette frame and let cure per manufactures' recommendations.

CASSETTE FRAME INSTALLATION - "Glass-to-Edge" Head

STEP 1: Position the cassette frame at a slight angle to the head frame back member as shown in Fig. 42.1

STEP 2: Roll the sill of the cassette frame towards the sill of the back member and slide up engaging the head anchor P4204 as shown in Fig. 42.2.

STEP 3: Attach sill anchors P4200, Fig. 42.2 at 12" o/c and no more than 2" from ends.

STEP 4: Attach jamb / sill anchors P4201, Fig 42.3 at 12" o/c and no more than 2" from ends.

NOTE: Cassette unit below must use anchor P4201 at sill versus P4203 for installation clearance. Refer to PERIMETER SHEETS - DTL. 2B.

CASSETTE FRAME PERIMETER SEALING

NOTE: Use silicone or silicone compatible sealant at perimeter seal and glass. Follow manufacturers' recommendations for application, environmental conditions and curing time.

STEP 1: Using isopropyl 70/30 mixture two towel wipe clean all surfaces to receive perimeter seal.

STEP 2: Install sealant at perimeter, between glass and closure trim to fill all voids. See Fig. 82.1.

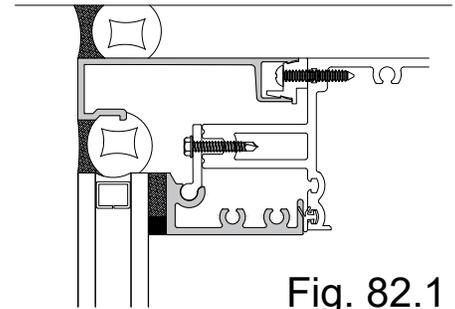

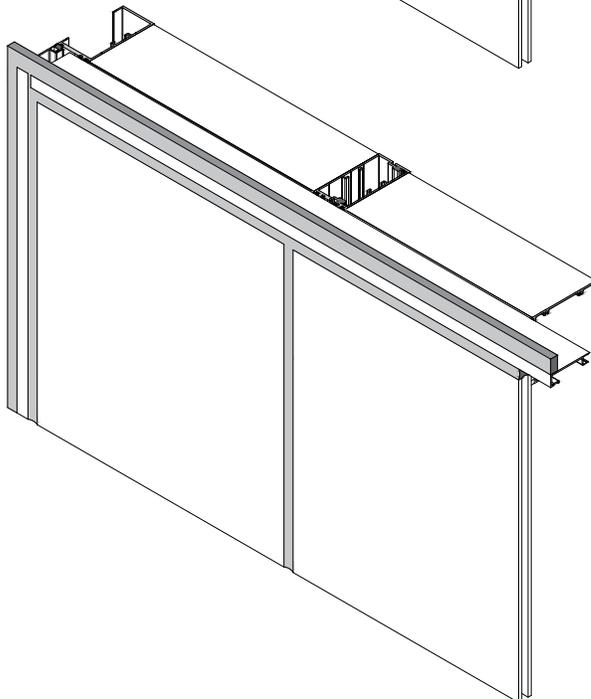

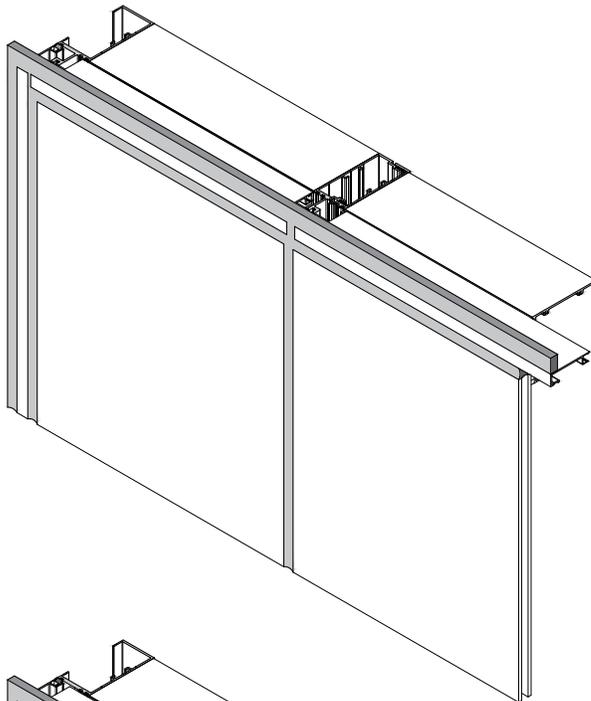

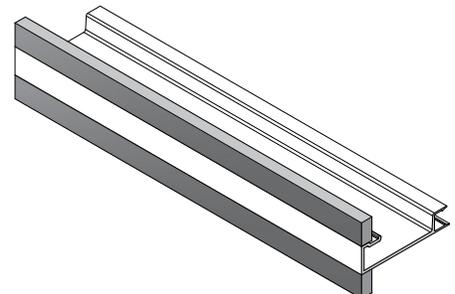

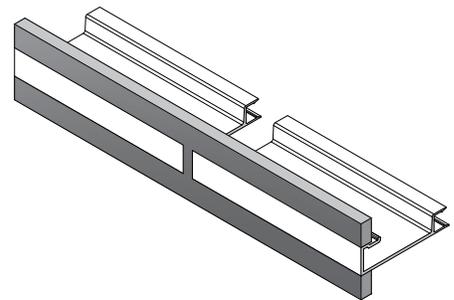

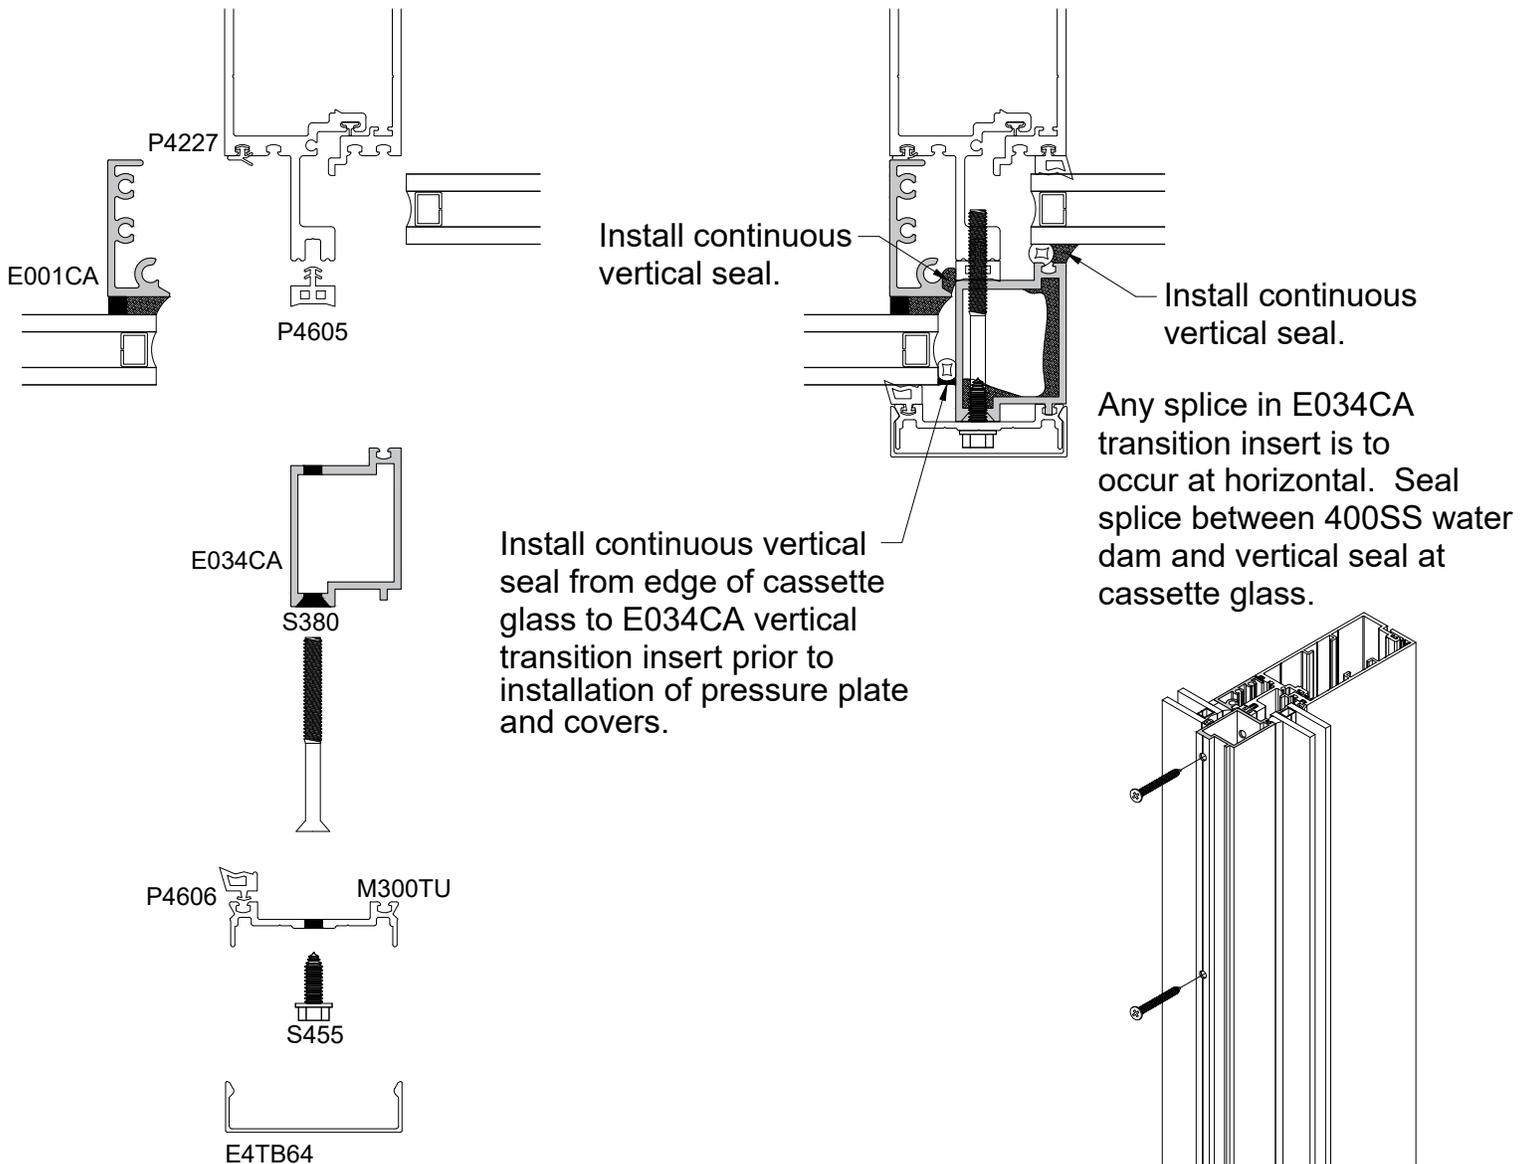

Fig. 82.1

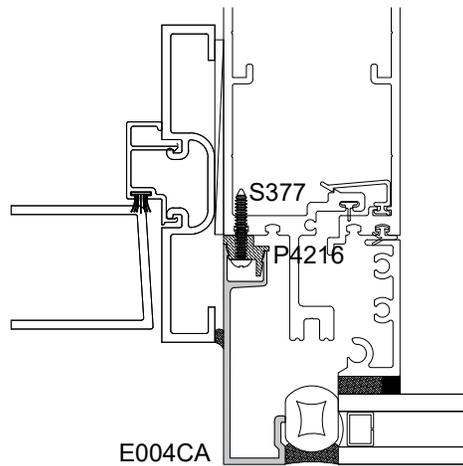

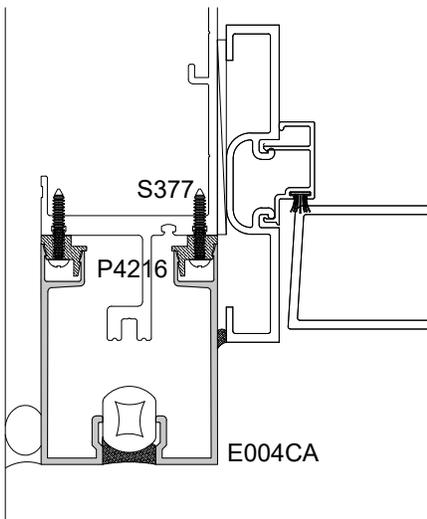

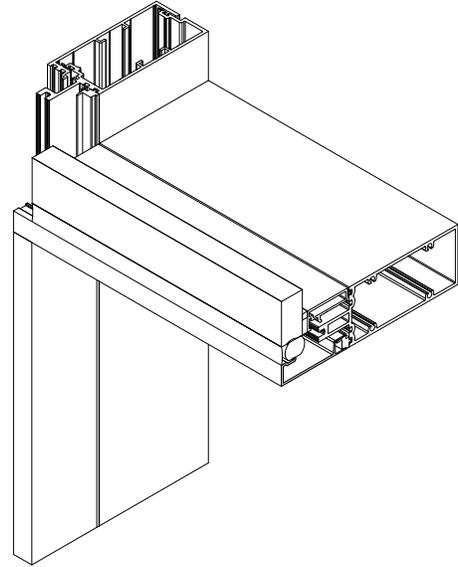

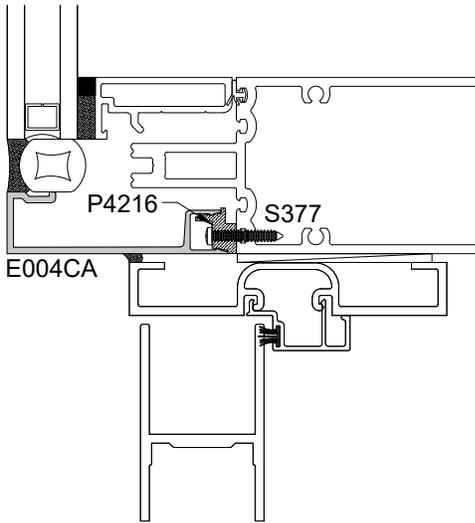

CASSETTE FRAME - SSG Cassette to Captured PP Transition

Note: Glass size at jamb of insert detail 0.1875" offset from cassette framing.

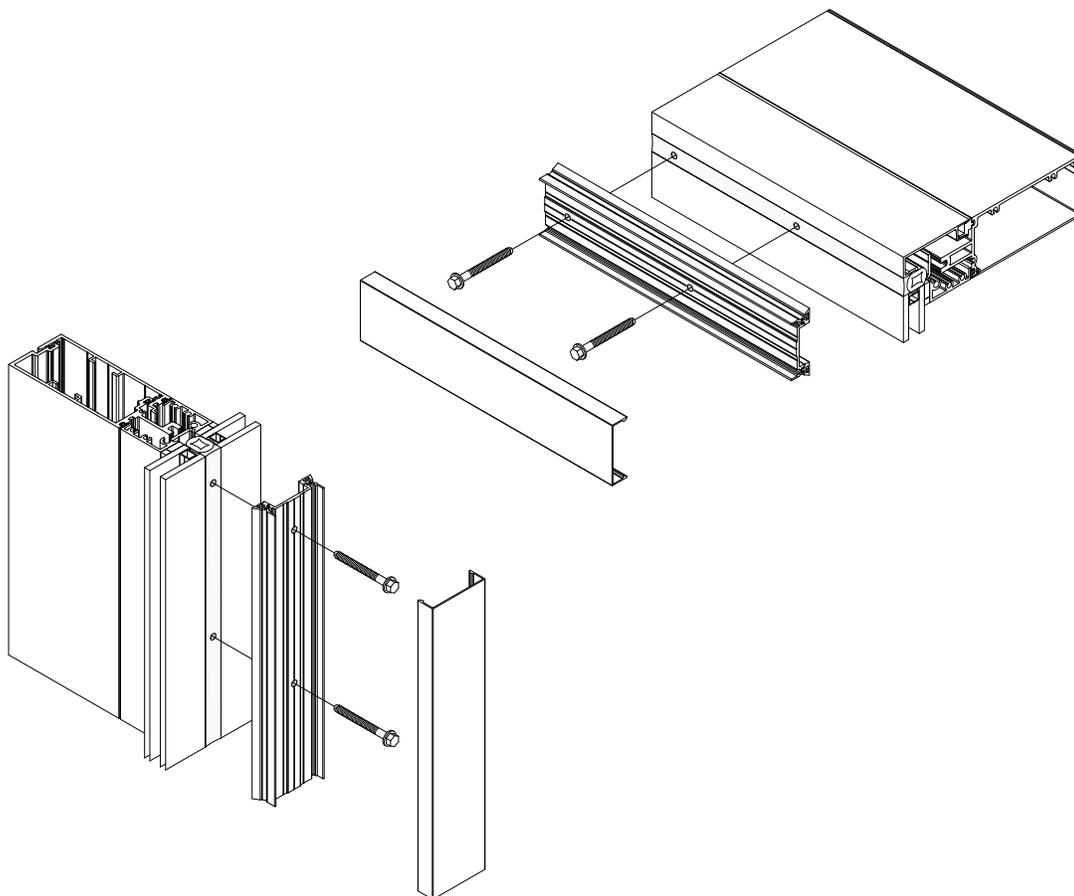

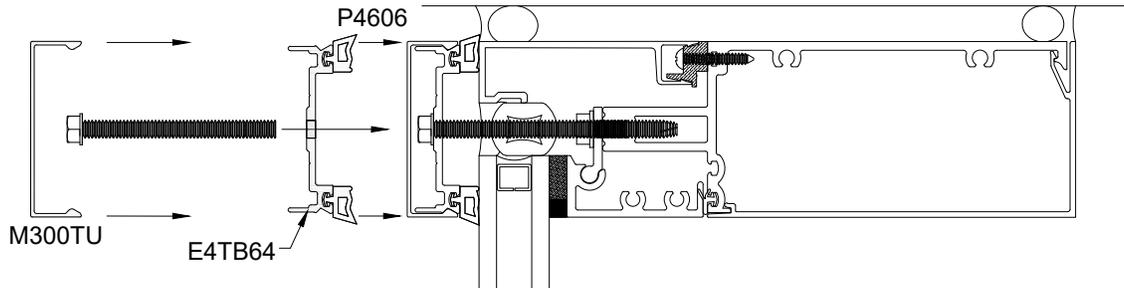

- STEP 1: Complete installation of adjacent cassette framing.
- STEP 2: Install thermal separator P4605 vertically and horizontally as required.
- STEP 3: Install continuous vertical seal between inside edge of cassette and thermal separator P4605
- STEP 4: Drill clearance holes in transition insert E034CA.
- STEP 5: Install adjacent glass and temp into place with P4634 temp clips.
- STEP 6: Install E034CA transition insert and secure with S380 fastener.
- STEP 7: Install continuous vertical seal between E034CA insert and cassette glass.
- STEP 8: Install continuous vertical seal between E034CA and curtain wall glass.
- STEP 9: All splices in E034CA are to be sealed and seal tied to 400SS adjacent water dams.
- STEP 10: Install pressure plates and covers per 400SS installation manual.

CASSETTE FRAME - Door Frame Trim Out

- STEP 1: Using fastener S377, install PVC separator horizontally and vertically around door frame location.
- STEP 2: Cut E004CA closure to length. NOTE: Horizontal trim to run across vertical closure.
- STEP 3: Using a rubber mallet and piece of wood blocking tap E004CA over P4216 until closure snaps into place.
- STEP 4: Install door framing and door stops per door installation manual.

CASSETTE FRAME - Exterior Accent Cover Installation

STEP 1: Cut pressure plate E4TB64 to length...end holes to be no more than 2" from ends, 1/4" clearance holes may have to be drilled at ends.

STEP 2: Hold E4TB64 in position and mark or drill holes in joint sealant.

STEP 3: Fill drilled hole with sealant.

STEP 4: Install gasket P4606 onto E4TB64.

STEP 5: Hold E4TB64 in position and secure with S403 fastener..use all holes in E4TB64 pressure plate.

STEP 6: Use blocking and tap cover (M300TU) into position.
