## Subject: **Adjustable Astragal Redesign**

**Description:** The adjustable astragal door stile has been redesigned. This new design allows the astragal to run in one continuous piece over top of the lock and eliminates the need for a lock faceplate on pairs of doors. Also, the door stile has been slightly reduced in width to allow more clearance between doors.

Current design and new design components are not interchangeable so all door stile extrusions, astragal extrusion, and the spring clip have been assigned new part numbers. The P1421 latch lock will be eliminated and replaced by P1573 Adams Rite 4900 series latch lock. This lock switch results in a change to our faceplates needed for single doors. For a short period of time single doors will need the P1421 lock while pairs of doors will use the P1573 lock. This will only occur until the new faceplates are available for the P1573. The P1573 lock will be made special for Tubelite and this application. It will not be Adams Rite's standard 4900 series dead latch.

All door stile prep locations are the same so locks can be switched for other models. The astragal will come prepped to accommodate the lock ordered with the door but can be replaced to match a different lock if needed.

This change will be effective for all door pair orders entered after 8/31/07.

New part numbers are as follows.

P1573L/R – Adams Rite 4900 Series Latch Lock – **List \$82.00**

P1574L/R – Adams Rite 4900 Series Latch Lock Faceplate – **List \$4.00**
