TUBELITE®

DEPENDABLE

LEADERS IN ECO-EFFICIENT STOREFRONT,
CURTAINWALL AND ENTRANCE SYSTEMS

Date: **11/29/16**

Engineering Bulletin: **111603**

Effective Date: Immediately

Released By: **Greg Hall**

Subject: **E24650, T24650 Product Launch**

The newest addition to the 2" x 6 1/2" storefront family is now available:

- T24650 - A single pour & debridged version of the TU24650 storefront system.
- E24650 – A non-thermal version of T24650.

As previously communicated, these systems replace the E14650 and T14650 products by offering improved thermal performance, more efficient throughput at Linetec and competitive pricing in the marketplace.

Price Book updates, details, installation instructions, specifications, windload charts, brochure and test report summaries for AWS, thermal & acoustic testing are available on our website. BIM models are in process and will be added soon.

Please note there are two versions of the T24650 product, depending on performance requirements. One version can be offered with standard pour/debridged vertical closures:
