Subject: **New Thermal Pressure Plate**

Tubelite introduces a new thermal pressure plate for use on all curtain wall systems with a 2-1/2" sightline. The new **Thermal Pressure Plate** employs the following features and benefits:

- The same 8" O.C. screw spacing as on our standard aluminum pressure plates
- With a comparable thickness as the aluminum pressure plates, the same fastener can be used with no flat washers required
- ID's built into the face for location of weep holes for the system used
- Standard isolators are used for the 400CW and 400T systems and a continuous seal for the 400TU and 400SS systems in lieu of an isolator
- The new **Thermal Pressure Plate** matches the strength of aluminum and exceeds that of our polyamide pressure plate while offering comparable thermal performance at the same price point as polyamide
- All standard 400 Series face covers are interchangeable with the new PTB120 pressure plate (E4TB64 shown below)

The new **Thermal Pressure Plate** is part number PTB120. Updates to the Price Book, Installation Manuals and Perimeter Sheet details are available now.
